Origami Sculptures

Commemorating the 150th anniversary of one of the most beloved classics of children's literature, this illustrated edition presents Alice like you've never seen her before. In 1865, Charles Lutwidge Dodgson, an Oxford mathematician and Anglican deacon, published a story about a little girl who tumbles down a rabbit hole. Thus was the world first introduced to Alice and her pseudonymous creator, Lewis Carroll. This beautiful new edition of Alice's Adventures in Wonderland features rarely seen illustrations by Salvador Dalí that illuminate the surreal yet curiously logical and mathematical realm into which Alice famously falls. In an informative and wide-ranging introduction, Carroll expert Mark Burstein discusses Dalí's connections with Carroll, his treatment of the symbolic figure of Alice, and the mathematical nature of Wonderland. In addition, mathematician Thomas Banchoff reflects on the friendship he shared with Dalí and explores the mathematical undercurrents in Dalí's work.

Discovering Chemistry

Chilton General Motors Mechanical Service

This book details the factors involved in the injection moulding process, from material properties and selection to troubleshooting faults, and includes the equipment types currently in use and machine settings for different types of plastics. Material flow is a critical parameter in moulding and there are sections covering rheology and viscosity. High temperature is also discussed as it can lead

to poor quality mouldings due to material degradation. The text is supported by 74 tables, many of which list key properties and processing parameters, and 233 figures; there are also many photographs of machinery and mouldings to illustrate key points. Troubleshooting flow charts are also included to indicate what should be changed to resolve common problems. Injection moulding in the Western World is becoming increasingly competitive as the manufacturing base for many plastic materials has moved to the East. Thus, Western manufacturers have moved into more technically difficult products and mouldings to provide enhanced added value and maintain market share. Technology is becoming more critical, together with innovation and quality control. There is a chapter on advanced processing in injection moulding covering multimaterial and assisted moulding technologies. This guide will help develop good technical skills and appropriate processing techniques for the range of plastics and products in the marketplace. Every injection moulder will find useful information in this text, in addition, this book will be of use to experts looking to fill gaps in their knowledge base as well as those new to the industry. ARBURG has been manufacturing injection moulding machines since 1954 and is one of the major global players. The company prides itself on the support offered to clients, which is exemplified in its training courses. This book is based on some of the training material and hence is based on years of experience.

In attempting to define a "poetics of paradox" from a traditional Chinese standpoint, James Liu explores through a comparative approach linguistic, textual, and interpretive problems of relevance to Western literary criticism. Liu's study evolves from a paradoxical view--originating from early Confucian and Daoist philosophical texts--that the less is "said" in poetry, the more is "meant." Such a view implied the existence of paradox in the very use of language and led traditional Chinese hermeneutics to a study of "metaparadox"--the use of language to explicate texts the meaning of which transcends language itself. As Liu illustrates elements of traditional Chinese hermeneutics with examples of poetic and critical works, he makes comparisons with the works of such Western literary figures as Shakespeare, Mallarmé, Pound, Ionesco, Derrida, and Shepard. The comparisons bring to light a crucial difference in conceptualization of language: Chinese critics, especially those influenced by Daoism and Buddhism, seem to have held a deictic view of language (language points to things), whereas Western critics seem to have thought of language as primarily mimetic (language represents things). Liu examines the consequences of these views, showing how both offer insights into the "meaning" of text and to what extent both have led to a "metaparadox of interpretation." A powerful wake-up call to all Americans With only 6 percent of the world's population, how long will the United States remain a global superpower? The answer, David Boren tells us in *A Letter to America*, depends on asking ourselves tough questions. A powerful wake-up call to Americans, *A Letter to America*, forces us to take a bold, objective look at ourselves. In *A Letter to America*, Boren explains with unsparing clarity why the country is at a crossroads and why decisive action is urgently needed and offers us an ambitious, hopeful plan. What the country needs, Boren asserts, are major reforms to restore the ability of our political system to act responsibly. By relying on our shared values, we can replace

cynicism with hope and strengthen our determination to build a better future. We must fashion a post-Cold War foreign policy that fits twenty-first-century realities—including multiple contending superpowers. We must adopt campaign finance reform that curbs the influence of special interests and restores political power to the voters. Universal health care coverage, budget deficit reduction, affordable higher education, and a more progressive tax structure will strengthen the middle class. Boren also describes how we can renew our emphasis on quality primary and secondary education, revitalize our spirit of community, and promote volunteerism. He urges the teaching of more American history and government, for without educated citizens our system cannot function and our rights will not be preserved. Unless we understand how we became great, we will not remain great. The plan Boren puts forward is optimistic and challenges Americans to look into the future, decide what we want to be and where we want to go, and then implement the policies and actions we need to take us there.

Born in Budapest in 1938, Dezső Tandori is a novelist, playwright, translator, and graphic artist, as well as one of Hungary's most celebrated poets. Here is a booklength selection of his work. Brilliantly eccentric, and characterized by an astonishing formal dexterity, these poems address fundamental issues: the effort to establish personal identity in an impersonal world, the conflicting demands--private, social, and historical--that provide the texture of a lived moment, and the necessity of affirmation that finds its locus in the act of writing. Published for the first time under his own name, a dark and haunting story from #1

New York Times bestselling author Michael Connelly Like his father before him, Brian Holloway is a safe man. That is, his specialty is opening safes. Every job is a little mystery, and he has yet to encounter a lock he can't break or a box he can't crack. But the day Holloway gets called in to open a rare, antique safe in a famous author's library, his skills open a door that should have remained closed. In this haunting and singular story, previously published anonymously, Michael Connelly proves once again that he is "superb at building suspense. the reader can never be sure what sudden turns the plot may take" (Wall Street Journal).
