Research Problems in Biology: Investigations for Students

The National Science Foundation funded a synthesis study on the status, contributions, and future direction of discipline-based education research (DBER) in physics, biological sciences, geosciences, and chemistry. DBER combines knowledge of teaching and learning with deep knowledge of discipline-specific science content. It describes the discipline-specific difficulties learners face and the specialized intellectual and instructional resources that can facilitate student understanding. Discipline-Based Education Research is based on a 30-month study built on two workshops held in 2008 to explore evidence on promising practices in undergraduate science, technology, engineering, and mathematics

(STEM) education. This book asks questions that are essential to advancing DBER and broadening its impact on undergraduate science teaching and learning. The book provides empirical research on undergraduate teaching and learning in the sciences, explores the extent to which this research currently influences undergraduate instruction, and identifies the intellectual and material resources required to further develop DBER. Discipline-Based Education Research provides guidance for future DBER research. In addition, the findings and recommendations of this report may invite, if not assist, post-secondary institutions to increase interest and research activity in DBER and improve its quality and usefulness across all natural science disciplines, as well as guide instruction and assessment across natural science courses to improve student learning. The book brings greater focus to issues of student attrition in the natural sciences that are related to the quality of instruction. Discipline-Based Education Research will be of interest to educators, policy makers, researchers, scholars, decision makers in universities, government agencies, curriculum developers, research sponsors, and education advocacy groups.

For nearly a decade, Teaching for Diversity and Social Justice has been the definitive sourcebook of theoretical foundations and curricular frameworks for social justice teaching practice. This thoroughly revised second edition continues to provide teachers and facilitators with an accessible pedagogical approach to issues of oppression in classrooms. Building on the groundswell of interest in social justice education, the second edition offers coverage of current issues and controversies while preserving the hands-on format and inclusive content of the original. Teaching for Diversity and Social Justice presents a well-constructed foundation for engaging the complex and often daunting problems of discrimination and inequality in American society. This book includes a CD-ROM with extensive appendices for participant handouts and facilitator preparation.

What Research Says to the Science Teacher

Science Education in Canada

Biological Sciences Curriculum Study Journal

Ted T. Aoki, the most prominent curriculum scholar of his generation in Canada, has influenced numerous scholars around the world. *Curriculum in a New Key* brings together his work, over a 30-year span, gathered here under the themes of reconceptualizing curriculum; language, culture, and curriculum; and narrative. Aoki's oeuvre is utterly unique--a complex interdisciplinary configuration of phenomenology, post-structuralism, and multiculturalism that is both theoretically and pedagogically sophisticated and speaks directly to teachers, practicing and prospective. *Curriculum in a New Key: The Collected Works of Ted T. Aoki* is an invaluable resource for graduate students, professors, and researchers in curriculum studies, and for students, faculty, and scholars of education generally.

Using clear explanations and cases, this must-have resource shows how formative assessment can improve student learning. Included are lesson plans and ideas for easy implementation.

An Assessment of Resource Studies in Canadian Schools

Unlike other test preparation material, our FTCE Biology teacher certification study guide drills all the way down to the focus statement level, providing detailed examples of the range, type, and level of content that appear on the test. Completely aligned with current FTCE exam, this book provides the support you need to study and pass the exam with confidence! This FTCE certification study guide includes one practice test to help you test your knowledge, understand how the exam is weighted, and identify skills and competencies you need to focus on. Our detailed answer explanations reference related skills in the book, allowing you to identify your strengths and weaknesses and interact with the content effectively. Maximize your study by prioritizing domains and skills you need to focus on the most to pass the exam. This study guide is perfect for college students, teachers, and career-changing professionals who want to teach Biology in Florida.

The focus of this study is on the participation rates of girls in senior level mathematics and physical science courses rather than on achievement. It also emphasizes differences between boys and girls and how gender shapes a decision about whether or not to enrol in a subject area such as algebra or physics. It looks at the girls' and boys' own constructions of their reasons for enrolling or not enrolling in the courses. Finally, it focuses on secondary schools.

Understanding Curriculum as Lived

This study describes the climate and ethos for science teaching in British Columbia by examining policies and practices in the classrooms, schools, and districts. The team visited 60 classrooms in eight districts and observed science classes in both English and French immersion at Grades 4, 7, and 10, as well as in English at Grade 3. The study was carried out as part of the 1991 Science Assessment. This report describes the study and the rationale for it; the methodology; historical and theoretical perspectives; the support for science; the association of science and secondary language learning; the pattern of science teaching in B.C.; and students' and teachers' views of science and science teaching.

Impact of Curriculum-based Examinations on Learning in Canadian Secondary Schools

The University of Victoria Pacific Centre for Scientific and Technological Literacy is one of five Centres for Research into Youth, Science Teaching and Learning (CRYSTAL) funded for 5 years (2005–2010) by the Natural Sciences and Engineering Research Council Canada (NSERC). Pacific CRYSTAL intended to promote scientific, mathematical, and technological literacy for responsible citizenship through research partnerships with university and educational communities. Pacific CRYSTAL's functional structure consisted of 3 research and development nodes connected to a leadership and administrative node, which was charged with facilitating the activities of 19 projects and 42 principal investigators, partners, and research associates. Node 1, an incubation centre, involved extracurricular authentic science, mathematics, and technology experiences; Node 2, a classroom testing environment, field-tested instructional ideas and strategies to develop evidence-based practices; and Node 3, lighthouse schools, involved systemic change and leadership opportunities that adapted, demonstrated, and disseminated tested ideas, resources, and strategies to a much broader education community and attempted to influence public policy. This book provides descriptions of the target goals, research and development projects, and lessons learned.
