The Toyota Way to Service Excellence: Lean Transformation in Service Organizations

“[An] essential book... it is required reading as we seriously engage one of the most important debates of our time.”—Sherry Turkle, author of *Reclaiming Conversation: The Power of Talk in a Digital Age* From drones to Mars rovers—an exploration of the most innovative use of robots today and a provocative argument for the crucial role of humans in our increasingly technological future. In *Our Robots, Ourselves*, David Mindell offers a fascinating behind-the-scenes look at the cutting edge of robotics today, debunking commonly held myths and exploring the rapidly changing relationships between humans and machines. Drawing on firsthand experience, extensive interviews, and the latest research from MIT and elsewhere, Mindell takes us to extreme environments—high atmosphere, deep ocean, and outer space—to reveal where the most advanced robotics already exist. In these environments, scientists use robots to discover new information about ancient civilizations, to map some of the world’s largest geological features, and even to “commute” to Mars to conduct daily experiments. But these tools of air, sea, and space also forecast the dangers, ethical quandaries, and unintended consequences of a future in which robotics and automation suffuse our everyday lives. Mindell argues that the stark lines we’ve drawn between human and not human, manual and automated, aren’t helpful for understanding our relationship with robotics. Brilliantly researched and accessibly written, *Our Robots, Ourselves* clarifies misconceptions about the autonomous robot, offering instead a hopeful message about what he calls “rich human presence” at the center of the technological landscape we are now creating. How do college students really conduct research for classroom assignments? In 2008, five large Illinois universities were awarded a Library Services and Technology Act Grant to try to answer that question. The resulting ongoing study has already yielded some eye-opening results. The findings suggest changes ranging from simple adjustments in service and resources to modifying the physical layout of the library. In this book the editors, both anthropological researchers have been involved with the project since its beginning. This book: Summarizes the study's history, including its goals, parameters, and methodology; Offers a comprehensive discussion of the research findings, touching on issues such as website design, library instruction for faculty, and meeting the needs of commuter and minority students; Details a number of service reforms which have already been implemented at the participating institutions. This book deepens our understanding of how academic libraries can better serve students' needs, and also serves as a model for other researchers interested in a user-centered approach to evaluating library services.

The decade that followed James Stockdale's seven and a half years in a North Vietnamese prison saw his life take a number of different turns, from a stay in a navy hospital in San Diego to president of a civilian college to his appointment as a senior research fellow at the Hoover Institution. In this collection of essays he offers his thoughts on his imprisonment. Describing the horrors of his treatment as a prisoner of war, Stockdale tells how he discovered firsthand the capabilities and limitations of the human spirit in such a situation. As the senior officer in confinement he had what he humbly describes as "the easiest leadership job in the world: to maintain the organization, resistance, and spirit of ten of the finest men I have ever known." His reflections on his wartime prison experience and the reasons for his survival form the basis of the writings reprinted here. In subject matter ranging from methods of communication in prison to military ethics to the principles of leadership, the thirty-four selections contained in this volume are a unique record of what Stockdale calls a "melting experience"—a pressure-packed existence that forces one to grow. Retired Vice Admiral James B. Stockdale, a Hoover Institution fellow from 1981 to 1996, was Ross Perot's 1992 presidential running mate and a recipient of the Medal of Honor after enduring seven and a half years as a prisoner of war in North Vietnam. He died in 2005 at the age of 81.

The ASQ Auditing Handbook

The book examines the evolution of American naval thinking in the post-Cold War era. It recounts the development of the U.S. Navy's key strategic documents from the fall of the Berlin Wall in 1989 to the release in 2007 of the U.S. Navy's maritime strategy, A Cooperative Strategy for 21st Century Seapower. An insightful and penetrating intellectual history, it critically analyzes the Navy's way of thinking and ideas, and recounts how they interacted with those that govern U.S. strategy to shape the course of U.S. naval strategy in the post-Cold War era. The book explains how the Navy arrived at its current strategic outlook and why it took nearly two decades for the Navy to develop a maritime strategy in an era in which the relative saliency of such should have been more apparent to Navy leaders. The author, a Navy captain, doesn't shy

from taking to task the institution and its leaders for their narrow worldview and failure to understand the virtues and contributions of American sea power, particularly in an era of globalization. It describes the reasons behind the Navy's late development of a maritime strategy during the post-Cold War era. It recounts the origins and evolution of the Navy's distinctive way of thinking and ideas about sea power since before the Second World War, particularly how they shaped and were shaped by the Navy's Cold War experiences. It argues that the Navy's way of thinking and ideas, and how they interacted those that governed U.S. strategy, bounded and channeled U.S. naval strategy away from a maritime approach as they had during the Cold War. It took an implausible series of events for one to emerge, including a losing war in Iraq—that called into question long-standing assumptions about U.S. strategy, threatened the Navy's relevance, and brought about a systemically oriented U.S. strategic approach—and the appearance of two maritime-minded Navy leaders. It focuses on the process by which the Navy developed its strategic documents, the process where institutional ideas are assembled, negotiated, and reshaped in light of other influences—i.e., the direction of U.S. strategy, budgetary constraints, perceived threats, and the competing interests of other domestic and institutional actors—because even though the subject is American naval thinking (and here it must be emphasized that the concept itself is somewhat metaphorical as only people can think), that is how real strategy is made.

Lean Six Sigma

Foreword by Admiral Sir John Woodward. When published in hardcover in 1997, this book was praised for providing an engrossing education not only in naval strategy and tactics but in Victorian social attitudes and the influence of character on history. In juxtaposing an operational with a cultural theme, the author comes closer than any historian yet to explaining what was behind the often described operations of this famous 1916 battle at Jutland. Although the British fleet was victorious over the Germans, the cost in ships and men was high, and debates have raged within British naval circles ever since about why the Royal Navy was unable to take advantage of the situation. In this book Andrew Gordon focuses on what he calls a fault-line between two incompatible styles of tactical leadership within the Royal Navy and different understandings of the rules of the games.

The Accidental Admiral

Despite demonstrated prowess in the handling of ships and sailors, five years after receiving his commission, Jim Stavridis was planning on getting out of the Navy and going to law school. His assignment officer, a young lieutenant commander by the name of Mike Mullen (who would go on to become Chairman of the Joint Chiefs) noticed something special in Stavridis, however, and convinced him to stay on active duty by dangling the prospect of Uncle Sam sending him to graduate school. Going ashore for a few years, Stavridis earned his MALD and PhD in international relations from the Fletcher School of Law and Diplomacy at Tufts University. The experience that taught him to look beyond the horizon and to think and act globally. Throughout his career Stavridis was anything but uniform in the way he approached his duties. An avid reader and prolific author he wrote more than 55 articles, commentaries, and book reviews in the Navy's professional journal "Proceedings" beginning when he was still a midshipman and continuing to this day. He has also written for some of the leading papers and journals in the United States, including the, New York Times, Washington Post, Atlantic Magazine, Naval War College Review, and many others His career was marked by unusually challenging assignments including command of a U.S. Navy guided missile destroyer in the early '90s; two stints as a top aide to two different Secretaries of

the Navy (one a Republican and the other a Democrat); and command of an aircraft carrier battle group. Stavridis narrowly missed being killed on September 11, 2001 when an American Airlines aircraft plunged into the Pentagon not far from his office. He was subsequently put in charge of a Navy think tank, "Deep Blue," which was tasked with reimagining the service's role in a post-9/11 environment. Already selected for his first star as 9/11 unfolded, his rise through the ranks was swift – even going directly from one-star to three-star admiral without ever wearing two stars – when he was selected to be the senior military assistant to the very demanding Secretary of Defense, Donald Rumsfeld. Surviving that crucible, he was nominated for his fourth star at the age of 50, one of the youngest persons to serve at that rank in modern history. He then became the first naval officer to lead the U.S. Southern Command – responsible for all U.S. military operations in the Caribbean and Central and South America. At the end of that assignment he was picked to be the first naval officer to serve as Supreme Allied Commander of NATO – a job first held by Dwight D. Eisenhower and then by a string of prominent generals. When he was given that assignment, the New York Times referred to Stavridis as a "renaissance Admiral," something Stavridis turned into "the accidental Admiral" given he was the first sailor to head to that command. That is where this book, "The Accidental Admiral" picks up – as Stavridis enlightens readers about securing such a position and serving as NATO's top man in uniform for four years. They were challenging years indeed. Stavridis was responsible for NATO operations in Afghanistan, its conduct of a military intervention in Libya and preparation for possible war in Syria – as well as worrying about the Balkans, cyber threats, piracy, all while cutting NATO by 30% due to budget reductions by the 28 nations of the Alliance. More than just describing the history of what happened, Stavridis shares with reader the "why" and gives insights into the personalities of those with whom he dealt, ranging from President Barack Obama; Secretary of State Hillary Clinton; Secretaries of Defense Robert Gates, Leon Panetta, and Chuck Hagel; Afghan President Hamid Karzai; Generals David Petraeus, Stanley McChrystal, John Allen and many more. The Accidental Admiral is more than just a memoir. The book is also a very personal reflection of the burdens and benefits of leadership, and Stavridis also shares his insights on strategic communications, planning, and the convergence of threats that will confront the U.S. and its allies in the near future.
