The SAGE Handbook of Current Developments in Grounded Theory

"I know that-what we are. But why do you hate me?" Escape. It was the only word pounding through fallen angel Sage Cross' mind when her world came crashing in. Fallon was nothing but a painful memory, something she wanted-no, needed-to forget. Now she has a chance to let that part of her past go and be in a place where she can finally heal. A place where lamia and lapsus don't exist and she can just be Sage. But of course, it doesn't last. Nothing ever lasts. Her happily mediocre life with her cat familiar, Sunny, and best friends, Janie and Perkins, is nothing but a mirage. Especially when a brooding vampire-first name Adam, last name irrelevant-takes roots in her life. Someone who hates her for simply existing, yet she is unable to get him out of her mind. Or her heart. With her brother and friends in danger, Sage is the key to either ending it all or causing the destruction of not one, but two supernatural beings. Fallen angels. Lapsus. Vampires. Lamia.

Who will survive? Sage, the final installment in the Blood Crave Series.

An Introduction to Personality, Individual Differences and Intelligence

The General Educator's Guide to Special Education

The number one skill for any entrepreneur or business owner is the ability to sell. Why? Because sales = income. Yet, many fail financially not because they do not have great ideas or even good work ethic, but typically because they don't know how to, refuse to, are afraid to, or don't think it is important to know how to sell. SalesDogs was written as the very first of the Rich Dad Poor Dad "how-to" Advisory series to teach in a very fun and impactful way how to overcome the fears, the myths and the obstacles to selling your products, services or yourself. It then teaches a simple, time-proven process of selling that will generate great income in most any business. The reader will learn the five most important selling skills to master, how to overcome any objection, manage a territory and much more. The book quickly de-bunks the idea that you have to be an overly aggressive "attack dog" to be successful. It uses the metaphor of "man's best friend" to say that a great sales person is like a loyal, persistent and lovable canine. It stipulates that there are five different "breeds" or personalities of SalesDogs that can each make a lot of money by playing to its strength. You will learn how to identify, maximize and train to that strength and also how to teach others on your team to do the same. While the book is fun and engaging, it also dives deep into the personal development issues that block a person's ability to generate income and how to overcome them. The book is perfect for first time salespeople, individuals who are uncomfortable with the notion of "selling", those who need to train others to sell and those who want to simply get better quicker.

Diary Methods, sometimes known as intensive repeated measures or ecological assessments, are an important method for social and personality psychologists. The volume begins with a rationale for such methods, with an emphasis on social and personality psychology, and then provides a non-technical, accessible description of how to use such methods, including advice on study design, data analysis, and preparation of papers. Both interval contingent methods (e.g., daily diaries) and event contingent methods (e.g., social interaction diaries) are covered. The author, John B. Nezlek, has used these methods in his own scholarly work for over 30 years and has written this book to provide an introduction to these methods for those who are not familiar with them. This book will be perfect for advanced students and researchers in social and personality psychology and related disciplines who use and want to use diary methods in their research. The SAGE Library of Methods in Social and Personality Psychology is a new series of books launching in early 2011 to provide students and researchers with an understanding of the methods and techniques essential to conducting cutting-edge research. Each volume explains a specific topic and has been written by an active scholar (or scholars) with expertise in that particular methodological domain. Assuming no prior knowledge of the topic, the volumes are clear and accessible for all readers. In each volume, a topic is introduced, applications are discussed, and readers are led step by step through worked examples. In addition, advice about how to interpret and prepare results for publication are presented. The Library should be particularly valuable for advanced students and academics who want to know more about how to use research methods in social and personality psychology.

Personality Theories: Critical Perspectives is the groundbreaking, final text written by Albert Ellis, long considered the founder of cognitive behavioral therapies. The book provides students with supporting and contradictory evidence for the development of personality theories through time. Without condemning the founding theorists who came before him, Ellis builds on more than a century of psychological research to re-examine the theories of Freud, Jung, and Adler while taking an equally critical look at modern, research-based theories, including his own.

Beloved Son

Educational Research

Beloved Son A spiritual novel that blends fact and fiction set in a time when rumors and visions among Jerusalem's Jews heralded the arrival of a Messiah to free them of their ages-long oppression. Jesus's example of Divine Love is newly-explored as the Son of God walks the path of teacher, healer and prophet while guiding his disciples. This reimagined journey illustrates Christ's teachings of universal truths while exploring alternative ways for him to fulfill the prophecies.* Did Jesus really die on the cross?* Was there a romantic connection between Jesus and Mary Magdalene?* If Jesus could read minds - how could Judas have betrayed him?* If Jesus was a shape-shifter - then how could he be captured against his will? The journey of Christ fulfilling his destiny as prophesied is uniquely re-imagined in this mystical adventure.

You will then stride confidently into intermediate level analyses such as ANOVA, before ending your journey with advanced techniques such as MANOVA and multilevel models. Although there is enough theory to help you gain the necessary conceptual understanding of what you're doing, the emphasis is on applying what you learn to playful and real-world examples that should make the experience more fun than you might expect. Like its sister textbooks, *Discovering Statistics Using R* is written in an irreverent style and follows the same ground-breaking structure and pedagogical approach. Assumptions Abound

Most books on measurement present a statistical orientation or an orientation toward measurement theory. Although these approaches are valuable, Measurement Error and Research Design is motivated by the lack of literature that enhances understanding of measurement error, its sources, and its effects on responses. This book's purpose is to enhance the design of research, both of measures and of methods. An author maintained website, <http://www.business.uiuc.edu/~madhuv/msmt.html> features datasets and suggestions for using the book in courses.
