The Senior Sleuth's Guide to Technology for Seniors

Mountain Bike! Orange County covers the gamut of mountain biking behind the Orange Curtain, where consistently fine weather makes the activity possible all year round. From the majestic peaks of the Santa Ana Mountains to the rolling grasslands of Chino Hills State Park, there's something for everyone here. Cyclists can rip extreme drops in Laguna Canyon, explore the vast reaches of the Cleveland National Forest, and race down suburban landscapes on the Fullerton Loop. Written in a clear, brisk style, the book contains at-a-glance information for difficulty, length, and trail conditions. Descriptive ride profiles based on GPS-based maps give riders a fast visual of the pleasure and pain that lie ahead. And for those post-ride kick-backs, there are listings of where to grab a brew in the area. Ideal for either an after-work exercise or a daylong exhibition, Mountain Bike! Orange County includes rides for both novice and seasoned riders.

This book shows you how to use a GPS and Google Earth to create simple and expressive maps to share on the web like the one shown on the cover. With a reading time of a mere 10 hours you will learn to work with a GPS without making mistakes, to use it with Google Earth including in areas without internet access and to quickly create diverse interactive maps that

other people can see and modify over the internet without the need for experts or unnecessary complications. Even though it has been written in the context of Relief and Development work, the same process is valid for whatever other application.

Outdoor Navigation with GPS

GPS Made Easy

Updated February 2015 Exploring With GPS presents a practical approach to using the Global Positioning System in the outdoors using mapping GPS receivers, digital topographic maps, and satellite imagery. The book uses realistic scenarios and plenty of screen shots and photos to show you how to find your way in the backcountry quickly and easily. This book is for hunters, rescue teams, hikers, mountain bikers, anglers, geocachers, backpackers, cross-country skiers, snowshoers, boaters, and everyone who uses recreational GPS in the outdoors. Using GPS, anyone, anywhere on Earth, can find their position within a few feet using an inexpensive hand-held GPS receiver. That simple ability has completely revolutionized every field that uses positioning, navigation, and timing information, including outdoor recreation. Not only can you find your way through the wilderness with unerring precision regardless of weather, location, or time of day, you can work with computers and the World Wide Web to plan your outdoor adventures from home. You can record our trip in the field, download it to a computer, attach labels, graphics, elevation profiles, comments and photos, and then share it with friends or publish it for all to see on the Internet. As a result there is a rapidly growing amount of free trip and backcountry information on the Web. This book shows you how to tap into this remarkable capability to make your own outdoor adventures safer and more enjoyable.

Lakeland Boating

For outdoor adventurers who hike, fish, kayak, cross-country ski, or mountain bike in the backcountry, a GPS receiver can help them reach their destination and return safely -- but only if they know how to use it! Here is the guide to getting the most out of a GPS receiver, from basic consumer advice to advanced techniques. It even includes fun solo and team games

that utilize GPS. Starting with essential definitions and moving on to creating waypoints, and using your GPS with a computer, this succinct book teaches the basics of navigation and outdoor GPS use. Advanced techniques are covered, such as creating custom maps, and new technologies are discussed, including using GPS-enabled mobile phones, and how to use GPS with Google Earth and Google Maps. With years of experience as a GPS instructor, Hinch is well-versed in all aspects of navigation and GPS use, and he covers them in a jargon-free, easy-to-follow style.

This manual is a complete user manual for Garmin handheld receivers. It covers theory and practical applications for gps technology and the receivers that use this technology. Representative products for all of the Garmin handheld receivers, past and present, are explained and tips are given on getting the most out of each model. It is designed to augment the user manuals that are supplied with each product but is complete enough to replace them. While this manual is Garmin specific it provides a basic understanding of gps devices that is applicable to any gps receiver. It was written over a period of 4 years and has been reviewed and tested by hundreds of users over that period. It has been used as the reference for training on gps usage. Because of its unique approach that develops the theory behind operation as well as specific details, it provides a basis that will allow a user to be able to use any gps receiver. Skills in the use of a gps will provide assurance and safety for the user. Topics extend beyond just operating the unit to actually being able to use it for navigation on the land, in the sea, or in the air. Topics are applicable whether you are hiking or driving to your destination. These topics include product operation, waypoints, routes, tracklogs, navigation, maps and databases, product selection, features, theory, accessories, and product unique functions.

For about $150 anyone can access the United States' multi-billion dollar GPS program. Using GPS Units: A Practical Guide for Hikers, Bikers, Paddlers, and Climbers shows readers how to plug in and enhance most any outdoor experience. Whether a hiker on a weekend trip through the Great Smokies, a backpacker cruising the Continental Divide Trail, a mountain biker kicking up dust in Moab, a paddler running the Lewis and Clark bicentennial route, or a climber pre-scouting the routes up Mount Shasta, a simple handheld GPS unit is fun, useful, and can even be a lifesaver. Described in conjunction with today's most popular GPS software, easy to understand information enables readers to plan a trip, navigate along a route, gather data from the outing, and analyze trip data after the trip. Information is power, and a GPS unit is today's preferred tool to harness the power of navigational technology for a more enjoyable, more informative, and possibly safer outdoor experience.
