Classroom tested and reviewed, the third Canadian edition of Dosage Calculations draws upon the strengths of two marketing leading Canadian editions and nine US editions that have together helped over 1 million faculty and students allay math anxiety and promote confidence in their ability to perform accurate calculations. The new edition also responds to changes in the healthcare system by introducing new drugs, replacing outdated drugs, and discussing new or refined ways of administering medications. This text is directed at the student or professional who feels uncomfortable with mathematics and wants to improve their ability to perform accurate drug dosage calculations. As a pioneer Canadian text in the topic of medication calculations, the authors have transcended provincial practices to provide a nation-wide perspective on dosage calculations. The text teaches the ?Three-Step Approach? for calculating dosages: 1. Convert measurements to the same unit; 2. Consider what dosage is reasonable; and 3. Calculate using the formula method.

The Cat - E-Book

Engaging science writing that bravely approaches a new frontier in medical science and offers a whole new way of looking at the deep kinship between animals and human beings. Zoobiquity: a species-spanning approach to medicine bringing doctors and veterinarians together to improve the health of all species and their habitats. In the tradition of Temple Grandin, Oliver Sacks, and Neil Shubin, this is a remarkable narrative science book arguing that animal and human commonality

can be used to diagnose, treat, and ultimately heal human patients. Through case studies of various species--human and animal kind alike--the authors reveal that a cross-species approach to medicine makes us not only better able to treat psychological and medical conditions but helps us understand our deep connection to other species with whom we share much more than just a planet. This revelatory book reaches across many disciplines--evolution, anthropology, sociology, biology, cutting-edge medicine and zoology--providing fascinating insights into the connection between animals and humans and what animals can teach us about the human body and mind.

Due to the simplicity, relative accuracy, fast result reporting, and user-friendliness of lateral flow immunoassay, its use has undergone tremendous growth in the diagnostic industry in the last few years. Such technology has been utilized widely and includes pregnancy and woman's health determination, cardiac and emergency conditions monitoring and testing, infectious disease including Flu screening, cancer marker screening, and drugs abuse testing. This book covers the scope of utilization, the principle of the technology, the patent concerns, information on the development and production of the test device and specific applications will be of interest to the diagnostic industry and the general scientific community.

For a happy relationship with your cat, go beyond the looks and make your pick based on demonstrated breed behavior. This is the advice of the Harts, two experts in animal communication and behavior, whose new book takes the process of selecting a cat to the next level by offering data-based behavioral profiles of a wide range of cat breeds. Developed over a lifetime of research and through extensive interviews with eighty veterinary experts, the profiles are presented in easy-to-use graphical form. A history of the development of different breeds is presented, and then breed-specific differences across a range of variables are discussed. These include twelve behavioral traits, in areas such as affection, sociality, activity level, and litter box use. After giving guidance about choosing a cat, the authors present some strategies for avoiding problem behaviors and resolving those that emerge. They also share fascinating theories about the origins of various common cat behaviors, including purring, yawning, eating grass, "flipping out" on catnip, and staking out territory. While the focus is on purebred cats, there is also lots of good information for owners of blends. The book ends with helpful guidance on further reading. Based on the latest science, this is a great book for anyone interested in the fundamental building blocks of feline behavior, and an invaluable handbook for cat owners.

presented. Our group has grown since we last met in Dortmund in 1971. This is a good indication that a spiraling of our interests has taken place with the effects of the initial good work felt, not just in one corner of the globe, but in all four. With such a start, it was only appropriate that an international society was formed at the meeting to further coordinate our mutual undertaking. Henceforth it shall be known as the International Society of Oxygen Transport to Tissue. A final note of acknowledgement should be made to those who were in the supporting cast, not only in making the meeting in Charleston and Clemson a success, but also in the compiling of this book. Gratitude is due to Dr. Daniel H. Hunt for his efforts, the end product of which you have in your hands. Considerable service was rendered by Mr. Robert J. Adams, Mr. Buddy Bell and Mr. Nathan Kaufman during the symposium itself. Much typing, organizing and record keeping was done by our lovely secretaries, Laura B. Grove, Muff Graham and Kaye Y. Zook.

The use of drugs in food animal production has resulted in benefits throughout the food industry; however, their use has also raised public health safety concerns. The Use of Drugs in Food Animals provides an overview of why and how drugs are used in the major food-producing animal industries--poultry, dairy, beef, swine, and aquaculture. The volume discusses the prevalence of human pathogens in foods of animal origin. It also addresses the transfer of resistance in animal microbes to human pathogens and the resulting risk of human disease. The committee offers analysis and insight into these areas Monitoring of drug residues. The book provides a brief overview of how the FDA and USDA monitor drug residues in foods of animal origin and describes quality assurance programs initiated by the poultry, dairy, beef, and swine industries. Antibiotic resistance. The committee reports what is known about this controversial problem and its potential effect on human health. The volume also looks at how drug use may be minimized with new approaches in genetics, nutrition, and animal management. November
