Violent Emotions

Ethnostatistics

When trying to explain any success or failure in second language (L2) learning, the term 'motivation' is often used by teachers and students alike. Indeed, motivation is one of the key learner factors that determines the rate and success of L2 attainment: it provides the primary impetus to initiate learning the L2 and later the driving force to sustain the long learning process. Without sufficient motivation, even individuals with the most remarkable abilities cannot accomplish long-term goals. This book takes a practical approach to teaching motivational strategies in the language classroom, and gives the teacher strategies that they can use to motivate language learners.

Handbook of Research on Tacit Knowledge Management for Organizational Success

The 24th volume in this prestigious series of annual volumes, the International Review of Industrial and Organizational Psychology 2009 includes scholarly, thoroughly researched, and state-of-the-art overviews of developments across a wide range of topics in industrial and organizational psychology. An international team of highly respected contributors reviews the latest research and issues in the field with eight chapters supported by extensive bibliographies. This volume is

ideal for organizational psychologists, MSc level students in organizational psychology, and researchers seeking literature on current practice in industrial and organizational psychology.

The Derrida Reader

Americas Revolution Against Exploitation The book suggests that these postmodern times may well pass by America, that it will be stymied by the legacies of a post-industrialism in which a form of power/knowledge was institutionalized in corporate embodiments swollen with the bureaucratized complacency that defense-related contracting induced in organizations remote from competitive struggle in a consumer market-place. It is now clear that the post-industrial society was a knowledge-based society shaped by the requirements of the Cold War and the warfare state. It was these which materialized the shift in organizational social relations from an industrial epoch founded on exploitation to one in which value be- came increasingly fused within the unity of power/knowledge condensed within the global, bureaucratic, corporate frame. America won the Cold War but is clearly in danger of losing the aftermath, not to the old adversaries, but to nations which were not even admitted to the Cold War game as equal players: most noticeably Japan, but also Germany, the powerhouse at the center of the European Community, as well as the Newly-Industrializing Countries of East Asia. Statutorily, of course, the first two were not allowed to, play as part of the Cold War settlement at Yalta. Exclusion spawned different strategies premised on structures which were and had always been institution ally distinct. What is to be done? Boje and Dennehy are quite clear: first, there has to be a realization that the recipes of modernism were epoch or era specific and may be past their use-by date in some areas of organizational life. Second, that for as long as the lenses through which we focus on organizational life are made to modernist specifications, so that they focus on variables such as formalization, standardization, centralization, etc., as the strategic focus for research and teaching, we will be condemned to doing the time-warp over and over again, stuck in the modernist frame while the spectacle outside turns ever more postmodern. Third, that postmodernism offers an integrative focus which will aid us as teachers, students, researchers and practitioners in overcoming the excessive differentiation which has fragmented our intellectual and praxeological communities. Fourth, that in doing so it will serve to re-vitalize the study of management and organizations by opening it up to the cutting-edge of contemporary social science currents. If the hypotheses and argument that the authors advance are substantially correct, then we stand at one of those moments in history when the urge to resist and understand the limitations of the old slogans is critical. Americas Revolution Against Exploitation: The Story of Postmodern Management achieves this resistance and this understanding sufficiently to reconfigure our grasp of the modern condition in which we have been while pointing us towards what we may become. One should salute the book as a contribution to one of the projects for the future, one which, because of its easy style, deserves to secure postmodernism a good name in management and organization theory circles.

McClellan and Failure

Fifty Key Contemporary Thinkers surveys the most important figures who have

influenced post-war thought. The reader is guided through structuralism, semiotics, post-Marxism and Annales history, on to modernity and postmodernity. With its comprehensive biographical and bibliographical information, this book provides a vital reference work of the last fifty years.

Emotion and Conflict

The purpose for this book is straightforward: to provide an overview of planning principles and the tools used by planners to design campaign plans. Since 9/11, the US military has been involved in numerous actions, most notably in Iraq and Afghanistan. The approach to campaign planning has changed and evolved over this time, spawning a number of new concepts and approaches to planning; this book is intended to provide some assistance in understanding and applying those concepts and approaches.

Competition, Innovation, and Antitrust

Human resource (HR) governance is a relatively new construct that has recently begun attracting more and more attention in both research and practice. As a part of corporate governance, it represents the internal and external normative framework of human resource management and its supervision in organizations. This book theoretically integrates HR governance with the related domains of corporate governance, general management, HR management, and leadership. By doing so, it provides scholars and practitioners in the field with a precisely delineated system of theoretical concepts for their work and helps to translate these concepts into concrete research questions and practical guidelines. By interpreting the new ISO 30408 norm on human governance and taking into account recent developments, the book helps to comply with and anticipate current and future HR regulations.

The Language of Organization

Coffee: A Comprehensive Guide to the Bean, the Beverage, and the Industry offers a definitive guide to the many rich dimensions of the bean and the beverage around the world. Leading experts from business and academia consider coffee's history, global spread, cultivation, preparation, marketing, and the environmental and social issues surrounding it today. They discuss, for example, the impact of globalization; the many definitions of organic, direct trade, and fair trade; the health of female farmers; the relationships among shade, birds, and coffee; roasting as an art and a science; and where profits are made in the commodity chain. Drawing on interviews and the lives of people working in the business—from pickers and roasters to coffee bar owners and consumers—this book brings a compelling human side to the story. The authors avoid romanticizing or demonizing any group in the business. They consider basic but widely misunderstood issues such as who adds value to the bean, the constraints of peasant life, and the impact of climate change. Moving beyond simple answers, they represent various participants in the supply chain and a range of opinions about problems and suggested solutions in the industry. Coffee offers a multidimensional examination of a deceptively everyday but extremely complex

commodity that remains at the center of many millions of lives. Tracing coffee's journey from field to cup, this handbook to one of the world's favorite beverages is an essential guide for professionals, coffee lovers, and students alike.

Environmental Management Accounting: Informational and Institutional Developments

For thirty-three years and through three editions, Bass & Stogdill's Handbook of Leadership has been the indispensable bible for every serious student of leadership. Since the third edition came out in 1990, the field of leadership has expanded by an order of magnitude. This completely revised and updated fourth edition reflects the growth and changes in the study of leadership over the past seventeen years, with new chapters on transformational leadership, ethics, presidential leadership, and executive leadership. Throughout the Handbook, the contributions from cognitive social psychology and the social, political, communications, and administrative sciences have been expanded. As in the third edition, Bernard Bass begins with a consideration of the definitions and concepts used, and a brief review of some of the betterknown theories. Professor Bass then focuses on the personal traits, tendencies, attributes, and values of leaders and the knowledge, intellectual competence, and technical skills required for leadership. Next he looks at leaders' socioemotional talents and interpersonal competencies, and the differences in these characteristics in leaders who are imbued with ideologies, especially authoritarianism, Machiavellianism, and self-aggrandizement. A fuller examination of the values, needs, and satisfactions of leaders follows, and singled out for special attention are competitiveness and the preferences for taking risks. In his chapters on personal characteristics, Bass examines the esteem that others generally accord to leaders as a consequence of the leaders' personalities. The many theoretical and research developments about charisma over the past thirty years are crucial and are explored here in depth. Bass has continued to develop his theory of transformational leadership -- the paradigm of the last twenty years -- and he details how it makes possible the inclusion of a much wider range of phenomena than when theory and modeling are limited to reinforcement strategies. He also details the new incarnations of transformational leadership since the last edition. Bass has greatly expanded his consideration of women and racial minorities, both of whom are increasingly taking on leadership roles. A glossary is included to assist specialists in a particular academic discipline who may be unfamiliar with terms used in other fields. Business professors and students, executives in every industry, and politicians at all levels have relied for years on the time-honored guidance and insight afforded by the Handbook.

Engineering Professionalism and Ethics

Motivational Strategies in the Language Classroom

Today, agroforestry ranks high among the significant land-management initiatives that have undertaken the world over the past few decades. Indeed, it is now recognized as an important approach to ensuring food security and rebuilding resilient rural environments. Recent studies have shown that more than one billion hectares of agricultural land have more than 10% tree cover. Of this, 160 million hectares have more than 50% tree cover. Agricultural ecosystems can be further improved through agroforestry to ensure environmental restoration, greater farm productivity, and realization of ecological services, including climate change mitigation and adaptation for improved rural livelihood. Now, agroforestry is considered synonymous to climate smart agriculture and a remedy for many modern environmental challenges, and acts as a mitigating process for climate change. Consequently, the knowledge base of agroforestry is being expanded at a rapid rate as illustrated by the increasing number and quality of scientific publications of various forms on different aspects of agroforestry. Making full and efficient use of this upsurge in scientific agroforestry is both a challenge and an opportunity to the scientific community, particularly in the scenario of climate change. In order to help prepare themselves better for facing the challenges and seizing the opportunity, agroforestry scientists need access to synthesized information on multi-dimensional aspects of scientific agroforestry. It is believed that widespread scaling-up of agroforestry innovations during the next decade will greatly facilitate the success of global commitments and conventions such as the UN Millennium Development Goals, Convention on Biological Diversity, Framework on Climate Change, and the Convention to Combat Desertification. This book will be useful for engaging more stakeholders, including students, foresters, farmers, local communities, indigenous people, civil society institutions, the media, private sectors, scientists (working in the fields of Agroforestry, Forestry, Life Sciences, Animal Husbandry & Dairy, Social Science, Food Science and Environmental Sciences), policymakers, leaders, and the public.

Leadership and Performance Beyond Expectations

The Handbook of Conflict Resolution

This volume contains an assortment of papers written by eminent activists, administrators, and scholars from India on development-induced displacement of indigenous people from their lands and livelihoods. Using a Bordieuxian framework to understand the economics of development from a sociological perspective, the book explores the type of society that India seems to be pursuing, where sections of the country's population need to be cast aside to make way for others. The conclusion drawn is not how the various social groups respond to displacement, but how India's society as a whole seems eager to use a developmentalist paradigm despite being fully aware of the inequalities and marginalization that such paradigms create.

Work and the Nature of Man

International Review of Industrial and Organizational Psychology 2009

In the English-speaking world, Jacques Derrida's writings have most influenced the discipline of literary studies. Yet what has emerged since the initial phase of Derrida's influence on the study of English literature, classed under the rubric of deconstruction, has often been disowned by Derrida. What, then, can Derrida teach us about literary language, about the rhetoric of literature, and about questions concerning style, form, and structure? The Derrida Reader draws together a number of Derrida's most interesting and idiosyncratic essays that treat literary language, the idea of the literary, and questions of poetics and poetry. The essays discuss single tropes or concepts, a figure such as metaphor, the ideas of titles and signatures, proper names, and Derrida's thinking on such subjects as undecidability or aporia. The editor's introduction is a demonstration in practice of how Derrida reads and how he adapts the act of reading to the text or figure in question. The introduction also outlines each essay's main points, its usefulness for reading literary texts, and its particular area of interest. The Derrida Reader thus provides students of literature with a focused, contextualized, and readily understandable volume.

Managing the Non-Profit Organization

This book reviews recent progress in the theory of oligopoly and market leadership and provides new results on the theory of Stackelberg competition and Nash competition with strategic investment under endogenous entry. These theories are applied to models of competition in quantities, prices and to patent races. The results are used to propose a new approach to competition policy and issues of the abuse of dominance.

Search Conference

Recipient of the Mathematical Association of America's Beckenbach Book Prize in 2008! Leonhard Euler was one of the most prolific mathematicians that have ever lived. This book examines the huge scope of mathematical areas explored and developed by Euler, which includes number theory, combinatorics, geometry, complex variables and many more. The information known to Euler over 300 years ago is discussed, and many of his advances are reconstructed. Readers will be left in no doubt about the brilliance and pervasive influence of Euler's work.

Managing in the Postmodern World

'The book is a unique and excellent introduction to postmodern narrative analyses' - Organization Studies '[This book] should succeed in putting the metaphorical cat amongst just about every metaphorical pigeon that might imaginably take flight within the organization and communication research arenas. Story time will never be the same again, nor will interpretative research' - Stewart Clegg, University of

Technology, Sydney `Timely and first rate. It nicely stretches a reader's thinking about the topic' - Thomas Lee, University of Washington, School of Business `David Boje is a pioneering theorist in organization studies and management [His book] is yet another example of Boje's pioneering spirit and concern for exactitude. [His] scholarly account of narrative and antenarrative methods is both corrective and exploratory of how stories must be understood in terms of their own internal dynamics, and not viewed as static entities. Boje's book is a magnificent start A book that breaks new ground in organizational analysis, this is a must-read for researchers and practitioners in the fields of organization and management studies' - Adrian Carr, University of Western Sydney `Boje masterfully shows how to analyze texts and ideas before they are reduced and fitted into the dominant ideological frameworks of the day. [He] provides a powerful tool for achieving greater democracy in how we approach doing social science [and] liberates our capacity to make meanings for ourselves' - Paul Hirsch, Northwestern University, Kellogg Graduate School of Management `This is an important book. It is a major methodological contribution to critical, postmodern studies of organizations and management. It is essential reading for critical management scholars' - Robert P. Gephart, Jr., University of Alberta School of Business `David Boje has emerged as the leading postmodern thinker in management theory and organization science. His prolific output lights the path for others to follow in a field awakening to the challenge of postmodern critical theory. Updating and revising narrative theory for the prevailing "postmodern condition," Boje masterfully reconstructs the concepts and methods of storytelling, as he subverts the dominant principles of modernist organization theory. He offers a subtle and complex notion of narrative This impressive book should leave an indelible mark on management and organization studies' - Steven Best, University of Texas, El Paso An essential guide for academics and researchers needing to look at alternative discourse analysis strategies. As a research tool, narrative methods have become increasingly useful in organization studies, where much research involves the interpretation of 'stories' in some form. This methodology can be applied where qualitative story analyses can help to assess interview, newspaper or web document stories for research projects. In this book, Boje sets out eight analysis options that can deal with storytelling, recognizing that stories in organizations can be self-destructing, flowing, networking and not at all static. In so doing, he shows ways in which narrative methods can be supplemented by 'antenarrative' methods, where fragmented and collective storytelling can be interpreted. A valuable resource that will be widely used in organizational or communications research, for graduate level qualitative methods seminars and by researchers wanting to do story analysis. David Boje is Professor at the New Mexico State University. He is also on the editorial board of the journal Organization.

Writing Literature Reviews

A compact overview of the most relevant concepts and developments in International Management. The various strategy concepts of internationally active companies and their implementation in practice are the core of this book. The authors describe the particularities of international value chain activities and management functions and offer a thorough understanding of how Production & Sourcing, Research & Development, Marketing, Human Resource Management and Controlling have to be designed in an international company and what models are

available to understand those activities in an international context. In 23 lessons, a comprehensive overview of all key issues is given. Each lesson is accompanied by a case study from an international company to facilitate the understanding of all important factors involved in strategic international management. In this third edition, all chapters have been updated, all case studies revised, new chapters and recent data were integrated.

Fifty Key Contemporary Thinkers

In 1966, Jacques Derrida gave a lecture at Johns Hopkins University that cast the entire history of Western Philosophy into doubt. The following year, Derrida published three brilliant but mystifying books that convinced the pollsters that he was the most important philosopher of the late 20th Century. Unfortunately, nobody was sure whether the intellectual movement that he spawned – Deconstruction – advanced philosophy or murdered it. The truth? – Derrida is one of those annoying geniuses you can take a class on, read half-a-dozen books by and still have no idea what he's talking about. Derrida's 'writing' – confusing doesn't begin to describe it (it's like he's pulling the rug out from under the rug that he pulled out from under philosophy.) But beneath the confusion, like the heartbeat of a bird in your hand, you can feel Derrida's electric genius. It draws you to it; you want to understand it but it's so confusing. What you need, Ducky, is Derrida For Beginners by James Powell! Jim Powell's Derrida For Beginners is the clearest explanation of Derrida and deconstruction presently available in our solar system. Powell guides us through blindingly obscure texts like *Of Grammatology* (Derrida's deconstruction of Saussure, Lévi Strauss, and Rousseau), "Différance" (his essay on language and life), *Dissemination* (his dismantling of Plato, his rap on Mallarmé), and Derrida's other masterpieces (the mere titles can make strong men tremble in terror – *Glas*, *Signéponge/Signsponge*, *The Post Card*, and *Specters of Marx*.) Readers will learn the coolest Derridian buzzwords (e.g., intertextuality, binary oppositions, hymen, sous rature, arche-writing, phallogocentrism), the high-and-low lights of deconstruction's history (including the DeMan controversy), and the various criticisms of Derrida and deconstruction, including Camille Paglia's objection that America, the rock-n-roll nation, isn't formal enough to need deconstruction. The master, however, begs to disagree: "America is Deconstruction" -Jacques Derrida

Planning for Action

Environmental Management Accounting (EMA) is increasingly recognised as a distinguished tool of environmental management. It helps to integrate a company's environmental and business interests, whereby enhancing corporate eco-efficiency in terms of reducing environmental costs or making one's product more competitive. This book gives a comprehensive coverage of the state of the art. It presents a number of EMA frameworks that companies can take as a basis for implementing their own specific EMA structures. Besides discussing environmental accounting issues within conventional management accounting, it gives a detailed picture of materials flow (cost) accounting as an alternative way of looking at the ecology-economy relationships at the corporate level. A fascinating case study shows how a large company (Siemens) applies materials flow accounting and what benefits it entails.

Sociology of Displacement

This volume of essays, written with the authors trademark elegance and wit, tackles subjects such as Action and Contemplation, Religion and Time, Reflections on the Lord's Prayer, and Notes on Zen.

Strategic International Management

"Boje does not reflect trends, he is among those who set them" - Hervé Corvellec, Department of Service Management, Lund University "How can I know what I think until I see what David Boje says? What he says about storytelling will forever change what we thought we knew about stories. With remarkable control over a complex argument, Boje recovers, re-punctuates, and re-animates a world of narrative and sensemaking that we have previously taken for granted!" - Karl E. Weick, Rensis Likert Distinguished University Professor of Organizational Behavior and Psychology, Stephen M. Ross School of Business at the University of Michigan "Few people understand stories and storytelling as well as David Boje. It is a measure of Boje's success as a theorist that the word story can never reclaim the innocence and simplicity it once enjoyed. Nor, with the benefit of his work, can organizations be viewed as spaces which occasionally or incidentally spawn stories. Boje's eagerly awaited book forces us to question many of our assumptions about storytelling; it also demands that we revise several of our assumptions about what organizations are" - Yiannis Gabriel, The School of Management, Royal Holloway University of London "Our company is made up of lots of stories. We've found that 'stories' get told and retold and become the fabric of an organization. 'Policies' lay unread in the company handbook or training manual. David Boje taught me the value of stories in an organization. Stories are the 'oil' that makes the gears work. How do you get your message heard in an organization with thousands of people? David Boje taught me the value of telling stories at Stew Leonard's!" - Stew Leonard Jr., Stew Leonard Organization "David Boje is one of the world's leading authorities on storytelling. His work has influenced a generation of organizational theorists and students. He not only provides new ways of understanding organizations but also provides fresh insights into the way in which stories function to provide meanings" - Heather Höpfl, University of Essex The idea of organizations using `storytelling' to make sense of themselves and their environment has generated a lot of excitement. Written by the leading scholar in this field, David Boje explores how narrative and storytelling is an important part of an organization's strategy, development and learning processes. With excellent examples from Nike, McDonald's and Disney, readers are shown how the theory that underpins organizational storytelling connects with storytelling in everyday organizational life. David Boje's theories and ideas in relation to the study of storytelling in organizations are highly influential and this book will be a `must have' for any student or scholar interested in the area.

Euler: The Master of Us All

Designed for corporate executives, workers, labor unions, customers, and suppliers, a practical guide offers ideas for reorganizing their business plans from a hierarchical, bureaucratic scheme to a democratic, participatory one. \$40,000

ad/promo. IP.

Concept and Quality

The importance of communication for organizations has been an ongoing concern since management was first theorized. Yet language has tended to be viewed as simply a medium of communication - without language per se being theoretically problematized. This book enables a more critical exploration of the major theoretical positions on language and organization, explaining why language warrants a more central and considered place in organization studies. Language and Organization explains how various perspectives on the relationship between language and organization can be represented and explored. Concerned with issues such as power, knowledge and organizational discourse, this book will provide essential new links for a prope

Murder in Parisian Streets

In the eyes of many historians, Union general George B. McClellan single-handedly did more damage to the Union war effort than any other individual--including Confederate commander Robert E. Lee. Promoting his own ideas and career regardless of the consequences, McClellan eventually became a thorn in the side of President Lincoln. Removed from command on November 5, 1862, McClellan left a legacy of excessive caution that continued to affect the Army of the Potomac. From West Point to Antietam, this volume examines McClellan's army career and especially how his decisions affected the course of the Civil War. Union actions are examined in detail with special emphasis on the roles McClellan played--or did not play. Excerpts from McClellan's orders and correspondence provide a contemporary picture and motives for his actions. An appendix examines the treatment given McClellan by various historians.

Coffee

A comprehensive, scholarly accessible study, in which the authors draw upon poetry and mythology, art and literature, archaeology and psychology to show how the myth of the goddess has been lost from our formal Judeo-Christian images of the divine. They explain what happened to the goddess, when, and how she was excluded from western culture, and the implications of this loss.

Huxley and God

This book brings together examples of leading thinking and international practice in the rapidly developing area of environmental management accounting .(EMA) The authors include academics and practitioners from industry and the subjects covered range from individual company experiences with implementing EMA to national experiences regarding the adoption and diffusion of EMA practices.

HR Governance

Leadership Practices Inventory

Continuous improvements in businesses practices have created enhanced opportunities for growth and development. This not only leads to higher success in day-to-day profitability, but it increases the overall probability of success for organizations. The Handbook of Research on Tacit Knowledge Management for Organizational Success is a pivotal reference source for the latest advancements and methodologies on knowledge administration in the business field. Featuring extensive coverage on relevant areas such as informal learning, quality management, and knowledge acquisition, this publication is an ideal resource for practitioners, marketers, human resource managers, professors, researchers, and students seeking academic material on knowledge management techniques.

Narrative Methods for Organizational & Communication Research

A Drucker management classic, first published in 1990, which breaks down any narrow definition of management and is aimed specifically at decision-makers and managers working in non-profit making and charitable organizations to help them apply the principles of good management to their sector. Drawing from the American experience, Drucker poignantly illustrates his discussion of management by quoting his in-depth interviews with top executives from non-profit making organizations. The issues of mission, performance, people and relationships, leadership and developing managers are eloquently discussed and Drucker provides Action Implications throughout the book which are of practical importance to the reader.

The Age of Participation

This volume discusses ethnostatistics - the interpretative study of the construction and use of statistics in social research - and will be of equal interest to qualitative and quantitative researchers across the social sciences. On the understanding that the development of a statistic is inherently a qualitative act, the author shows how this act can be studied and analyzed. The interpretative factors in statistical work can be demonstrated at a variety of levels; Gephart shows how each can be usefully illuminated through the use of ethnostatistics to produce more effective, reflexive social research.

Derrida For Beginners

Broken family bonds can be one of the most intense sources of conflict. This book - which provides vital insights into the dynamics of family and other forms of violence - explores the damage caused to familial and social bonds by escalating feelings of shame during marital quarrels. Theories and research from large-scale conflict, marital dispute and communication processes are reviewed and provide a background for Retzinger's new integrative theory, which focuses on social bonds. The theory is applied to four case studies of marital quarrels in order to advance understanding of the escalation and resolution of conflict. The book includes a description of an intensive case study method for analyzing discourse and provides

Agroforestry Research Developments

Why do most leaders or managers elicit merely competent performance from their followers, while a select few inspire extraordinary achievement? Leadership expert Bernard Bass takes this question beyond the usual speculation, presenting original research that for the first time documents the traits of the exceptional leader.

Storytelling Organizations

A balanced, thought-provoking series of selected readings on professionalism and ethics in engineering. Addresses such topics as the concept of professionalism; education and maintenance of competence; registration; the role of professional and technical societies; professional autonomy; engineers' responsibilities for the social effects of engineering practice; whistle-blowing; and the formulation and enforcement of codes of ethics. Includes case studies of the ethical dilemmas faced in engineering practice, compilations of major codes of engineering ethics, and references for further reading.

The Myth of the Goddess

This booklet gives an overview of the Participative Design Workshop, a change strategy which enables an organization to function in an interrelated structure of self-managing work groups.

Cad/cam Theory And Practice (soft Cover)

A social psychologist based at Columbia University, Lindner takes us across history and into nations worldwide to show how emotion spurs hierarchies of domination and therefore causes subjugation, human rights violations, abuse, conflict, and fighting. She spotlights results ranging from the binding and subsequent deforming of Chinese women's feet, to periods of slavery, bondage, feudalism, apartheid, and other unjust events across time. Related actions from political domination internationally, to spousal or child abuse on the homefront are addressed. Lindner looks at how widely divergent societies - from the Japan of Samurais, to the Meso America of Aztecs, up to the modern Iraq at war - are driven by hierarchies of emotionally-fueled control with rigid domination.

Implementing Environmental Management Accounting: Status and Challenges

The canards were cheap broadsheets and booklets that most often reported sensations, particularly murders. Made by members of the working and lower-middle classes and sold with great success to a vast and diverse audience, the canards deeply influenced and appealed to popular understandings of crime and punishment. Despite their importance in their day and their value to cultural studies, historians have paid them scant attention. In *Murder in Parisian Streets* Thomas Cragin provides an in-depth study of the production, sale, and content of the canards. He demonstrates their significance to nineteenth-century culture, even their role in determining the emerging tabloid's success. Cragin explores the

incremental creation of textual meaning in the canards' authorship, production, distribution, and consumption. He exposes the power of oral traditions as well as modern marketing at work upon this popular news literature. The canards challenge our assumptions about the nineteenth century's revolution in print and reorient our understanding of cultural creation through textual construction.

The Bass Handbook of Leadership

- Guides students in the preparation of literature reviews for term projects, theses, and dissertations.
- Most chapters are conveniently divided into easy-to-follow guidelines, sequential steps, or checklists. Numerous examples throughout the book show students what should and should not be done when writing reviews.
- Emphasizes critical analysis of reports of empirical research in academic journals—making it ideal as a supplement for research methods courses. This book makes it possible for students to work independently on a critical literature review as a term project.
- Nine model literature reviews at the end of the book provide the stimulus for homework assignments and classroom discussions.
- The activities at the end of each chapter keep students moving toward their goal of writing a polished, professional review of academic literature.
- Most examples include material from recently published research. Includes nine model literature reviews for discussion and evaluation.
