An understanding of the developments in classical analysis during the nineteenth century is vital to a full appreciation of the history of twentieth-century mathematical thought. It was during the nineteenth century that the diverse mathematical formulae of the eighteenth century were systematized and the properties of functions of real and complex variables

clearly distinguished; and it was then that the calculus matured into the rigorous discipline of today, becoming in the process a dominant influence on mathematics and mathematical physics. This Source Book, a sequel to D. J. Struik's Source Book in Mathematics, 1200-1800, draws together more than eighty selections from the writings of the most influential mathematicians of the period. Thirteen chapters, each with an introduction by the editor, highlight the major developments in mathematical thinking over the century. All material is in English, and great care has been taken to maintain a high standard of accuracy both in translation and in transcription. Of particular value to historians and philosophers of science, the Source Book should serve as a vital reference to anyone seeking to understand the roots of twentieth-century mathematical thought.

There is a great deal of interest in extending nondestructive technologies beyond the location and identification of cracks and voids. Specifically there is growing interest in the application of nondestructive evaluation (NOEI) to the measurement of physical and mechanical properties of materials. The measurement of materials properties is often referred to as materials characterization; thus nondestructive techniques applied to characterization become nondestructive characterization (NDCl. There are a number of meetings, proceedings and journals focused upon nondestructive technologies and the detection and identification of cracks and voids. However, the series of symposia, of which these proceedings represent the fourth, are the only

meetings uniquely focused upon nondestructive characterization. Moreover, these symposia are especially concerned with stimulating communication between the materials, mechanical and manufacturing engineer and the NDE technology oriented engineer and scientist. These symposia recognize that it is the welding of these areas of expertise that is necessary for practical development and application of NDC technology to measurements of components for in service life time and sensor technology for intelligent processing of materials. These proceedings are from the fourth international symposia and are edited by c.o. Ruud, J. F. Bussiere and R.E. Green, Jr. . The dates, places, etc of the symposia held to date area as follows: Symposia on Nondestructive Methods for TITLE: Material Property Determination DATES: April 6-8, 1983 PLACE: Hershey, PA, USA CHAIRPERSONS: C.O. Perhaps the most far reaching of the many changes wrought on the military by the First World War was the mechanization of the armed services. After many centuries of use by the Army for patrols and communications, the trusty horse was finally supplanted by the new-fangled motorcycle. This mechanization process gathered pace during the interwar years and in particular for the military motorcycle between 1925 and 1939. By the outbreak of the Second World War the motorcycle had become an important part of the military inventory and deemed 'suitable for WD (War Department) requirements'. When it was first published in 1995, this fully illustrated book was unique in looking at all military motorcycles of British origin known to have been tested mainly by the Mechanical Warfare Experimental Establishment (later called the Mechanisation Experimental Establishment). Ten years on, the authors are producing a fully revised and updated new edition of their book that will include three new chapters covering standard parts, bike markings and paint schemes. There will also be a picture spread that illustrates despatch rider's clothing. New to this edition will be a 16pp colour section that will illustrate restored WD bikes, including detail shots of engines and components.

In this revolutionary, thought-provoking book, Kabbalist Rav Berg dares to take on a subject long

considered taboo by medical and scientific establishments -- immortality. And that the ultimate getting of Kabbalah is really getting eternal life. Some of the greatest Kabbalists never died. Drawing upon the personal story of his own journey towards spiritual enlightenment, Rav Berg shares compelling kabbalistic insights into the origins of death, and the spiritual tools necessary for its final disappearance from the world. This is the remarkable story about how one of the greatest Kabbalists of this century got Kabbalah. This deeply felt memoir illuminates Rav Berg's relationship with his master, the great Kabbalist Rabbi Yehuda Brandwein, as well as the growth of The Kabbalah Centre, the world's largest organisation dedicated to spreading the wisdom of Kabbalah.
