Conceptual Cost Estimating Manual

Love's Uncertainty explores the hopes and anxieties of urban, middle-class parents in contemporary China. Combining long-term ethnographic research with analyses of popular child-rearing manuals, television dramas, and government documents, Teresa Kuan bears witness to the dilemmas of ordinary Chinese

parents, who struggle to reconcile new definitions of good parenting with the reality of limited resources. Situating these parents' experiences in the historical context of state efforts to improve "population quality," Love's *Uncertainty* reveals how global transformations are expressed in the most intimate of human experiences. Ultimately, the book offers a meditation on the nature of moral agency, examining how people discern, amid the myriad contingencies of life, the boundary between what can and cannot be controlled.

A Manual of the Short Story Art

The fifth edition of Delmar's Automotive Service Excellence (ASE) Test Preparation Manual for the A8 ENGINE PERFORMANCE certification exam contains an abundance of content designed to help you successfully pass your ASE exam. This manual will ensure that you not only understand the task list and therefore the content your actual certification exam will be based upon, but also provides descriptions of the various types of questions on a typical ASE exam, as well as presents valuable test taking strategies enabling you to be fully prepared and confident on test day.

Reforming Senates

Emergency care professionals are challenged to gather all available data during a relatively short period of time during which stabilization of the patient is underway and specific treatment modalities are being considered. This handbook is designed to help optimize patient care by serving as a reference of the underlying pathophysiologic processes that produce the patient's symptoms. Each chapter reviews the points that are key to the recognition and management of the common types of cardiovascular emergencies.

By 250 AD, Christianity had spread throughout India and China. Known as the Shining Religion or the Luminous Teaching, it drew adherents from Buddhism and Hinduism who were seeking a faith that taught the possibility of achieving a society founded on love and compassion for their fellow man. The new doctrine reached the island nation of Japan where it was so well received that Christianity threatened to supplant Buddhism as the dominant religion. By the close of the 16th century Japanese Christians numbered in the millions. Fifty years later Christianity was officially proscribed and Christians faced execution for openly practicing their faith. Jesus and the Samurai tells their fascinating story with facts drawn from ancient and modern sources.

As a leading Confederate general, Braxton Bragg (1817–1876) earned a reputation for incompetence, for wantonly shooting his own soldiers, and for losing battles. This public image established him not only as a scapegoat for the South's military failures but also as the chief whipping boy of the Confederacy. The strongly negative opinions of Bragg's contemporaries have continued to color assessments of the general's military career and character by generations of historians. Rather than take these assessments at face value, Earl J. Hess's biography offers a much more balanced account of Bragg, the man and the officer. While Hess analyzes Bragg's many campaigns and battles, he also emphasizes how his contemporaries viewed his successes and failures and how these reactions affected Bragg both personally and professionally. The testimony and opinions of other members of the Confederate army—including Bragg's superiors, his fellow generals, and his subordinates—reveal how the general became a symbol for the larger military failures that undid the Confederacy. By connecting the general's personal life to his military career, Hess positions Bragg as a figure saddled with unwarranted infamy and humanizes him as a flawed yet misunderstood figure in Civil War history.

Chris Powell's Choose More, Lose More for Life

Through the eyes of an inventor of new markets, *Good Derivatives: A Story of Financial and Environmental Innovation* tells the story of how financial innovation – a concept that is misunderstood and under attack – has been a positive force in the last four decades. If properly designed and regulated, these “good derivatives” can open vast possibilities to address a variety of global problems. Filled with provocative ideas, fascinating stories, and valuable lessons, it will provide both an insightful interpretation of the last forty years in capital and environmental markets and a vision of world finance for the next forty years. As a young economist at the

Chicago Board of Trade, Richard Sandor helped create interest rate futures, a development that revolutionized worldwide finance. Later, he pioneered the use of emissions trading to reduce acid rain, one of the most successful environmental programs ever. He will provide unique insights into the process of creating these new financial products. Covering successes and failures, the story describes the tireless process of inventing, educating and creating support for these new inventions in places like Chicago, New York, London, Paris and how it is unfolding today in Mumbai, Shanghai and Beijing. The book will tell the story of the creation of the Chicago Climate Exchange and its affiliated exchanges (European Climate Exchange, Chicago Climate Futures Exchange and Tianjin Climate Exchange, located in China). The lessons learned in these markets can play a critical role in effectively addressing global climate change and other pressing environmental issues. The author argues that market-based trading systems are a far more effective means of reducing pollutants than “command-and-control”. Environmental markets may ultimately help to find solutions to issues such as rainforest destruction, water problems and biodiversity threats. Written in an engaging, narrative style, Good Derivatives will be of interest to both practitioners and general readers who want to better understand the creative process of financial innovation. In the middle of so much distrust of markets, it is also a recipe of how transparent, well-regulated markets can be a force for good in the environmental, health, and social areas.

The Original Sinners Collection Volume 1

Scandalous, sexy and entirely absorbing, books 1-4 in Tiffany Reisz's best-selling Original Sinners series are now available in one can't-put-down collection... The Siren Notorious erotica author Nora Sutherlin thought she knew everything about being pushed to your limits. But in the world of BDSM, where passion is pain, nothing is ever that simple. The Angel Dominatrix Nora Sutherlin is doing something utterly out of character: hiding. It's a summer that will prove the old adage: love hurts. And no safe word can protect the heart. The Prince Two worlds of wealth and passion call to Nora Sutherlin and, whichever one she chooses, it will be the hardest decision she will ever have to make. Unless someone makes it for her... The Mistress There's punishment—and then there's vengeance... Nora Sutherlin is in handcuffs, held captive by two men. Under different circumstances, she would enjoy the situation immensely, but her captors aren't interested in play. Or pity.

Building the V6/Vega

This book has been developed from its earlier and far less formal presentment as the proceedings of a symposium entitled The Biochemistry of S-Adenosylmethionine as a Basis for Drug Design that was held at the Solstrand Fjord Hotel in Bergen, Norway on June 30-July 4, 1985. The purpose of the symposium was to bring together scientists from various disciplines (biochemistry, pharmacology, virology, immunology, chemistry, medicine, and so on) to discuss the recent advances that have been made in our understanding of the biological roles of S adenosylmethionine (AdoMet) and to discuss the feasibility of utilizing AdoMet-dependent enzymes as targets for drug design. Thus the information provided herein will be of value not only to basic scientists involved in elucidating the role of AdoMet in biology, but also to medicinal chemists who are using this basic knowledge in the process of drug design. The volume should also be of interest to pharmacologists and clinicians involved in biological evaluation of potential therapeutic agents arising from the efforts of the biochemists and medicinal chemists. Each plenary speaker at the symposium was requested to submit a chapter reviewing recent contributions of their discipline to our base of knowledge about the biological role of AdoMet. Topics covered in this volume include protein and phospholipid methylations (Section A), nucleic acid methyl ations (Section B), the regulation of AdoMet, S-adenosylhomocysteine, and methylthioadenosine metabolism (Section C), clinical aspects of AdoMet (Section D), and the design,

synthesis, and biological evaluation of trans methylation inhibitors (Section E).

This new study of senates in small powers across the North Atlantic shows that the establishment and the reform of these upper legislative houses have followed remarkably parallel trajectories. Senate reforms emerged in the wake of deep political crises within the North Atlantic world and were influenced by the comparatively weak positions of small powers.

Reformers responded to crises and constantly looked beyond borders and oceans for inspiration to keep their senates relevant.

Geography of the Gaze offers a new history and theory of how the way we look at things influences what we see. Focusing on Western Europe from the seventeenth to nineteenth centuries, Renzo Dubbini shows how developments in science, art, mapping, and visual epistemology affected the ways natural and artificial landscapes were perceived and portrayed. He begins with the idea of the "view," explaining its role in the invention of landscape painting and in the definition of landscape as a

cultural space. Among other topics, Dubbini explores how the descriptive and pictorial techniques used in mariners' charts, view-oriented atlases, military cartography, and garden design were linked to the proliferation of highly realistic paintings of landscapes and city scenes; how the "picturesque" system for defining and composing landscapes affected not just art but also archaeology and engineering; and how the ever-changing modern cityscapes inspired new ways of seeing and representing the urban scene in Impressionist painting, photography, and stereoscopy. A marvelous history of viewing, *Geography of the Gaze* will interest everyone from scientists to artists.
