Phlebotomy Handbook

FROM THE FORWARD: As a young lieutenant flying tactical C-130s at Langley Air Force Base (AFB), Virginia, in the spring of 1967, I heard one Friday night in the Officers ' Club that Tactical Air Command (our parent command) was looking for four C-130 copilots to transfer to Pope AFB, North Carolina, for training in a Top Secret C-130 squadron designated Combat Knife. That had to be more exciting than hauling trash, I thought. The following Monday I volunteered, and within a few months I was on my way to Pope AFB. This led to an exciting Air Force career flying the most versatile C-130 ever produced—the Combat Talon. Jerry Thigpen's study on the history of the Combat Talon is the first effort to tell the story of this wonderfully capable machine. This weapons system has performed virtually every imaginable tactical event in the spectrum of conflict and by any measure is the most versatile C-130 derivative ever produced. First modified and sent to Southeast Asia (SEA) in 1966 to replace theater unconventional warfare (UW) assets that were limited in both lift capability and speed, the Talon I quickly adapted to theater UW tasking, including infiltration and resupply and psychological warfare operations into North Vietnam. After spending four years in SEA and maturing into a highly respected UW weapons system, the Joint Chief of Staff (JCS) chose the Combat Talon to lead the night, low-level raid on the North Vietnamese prison camp at Son Tay. Despite the outcome of the operation, the Talon I cemented its reputation as the weapons system of choice for long-range, clandestine operations. In the period following the Vietnam War, United States Air Force (USAF) special operations gradually lost its political and financial support, which was graphically demonstrated in the failed Desert

One mission into Iran. Thanks to congressional supporters like Earl Hutto of Florida and Dan Daniel of Virginia, funds for aircraft upgrades and military construction projects materialized to meet the ever-increasing threat to our nation. Under the leadership of such committed, hard-driven officers as Brenci, Uttaro, Ferkes, Meller, and Thigpen, the crew force became the most disciplined in our Air Force. It was capable of penetrating hostile airspace at night, in a low-level mountainous environment, covertly to execute any number of unconventional warfare missions. The highly trained, disciplined Talon I crews led the invasions of Grenada in October 1983 and Panama in December 1989. The long-range “pathfinder” capability of the Talon I's made them the indispensable choice for these classic airfield seizure operations. In Desert Storm the Talon I's reverted to their Vietnam psychological warfare role by dropping millions of leaflets over Iraq and Kuwait. Additionally, they dropped eleven 15,000-pound BLU-82B bombs. Today the Talon I largely fulfills the penetrating tanker role, which includes the low-level penetration of hostile airspace and electronic countermeasures (ECM) protection for combat search and rescue rotary-wing forces. The Talon I has earned its place in history as the forerunner of modern Air Force Special Operations. Today both the Talon I and Talon II continue to infiltrate, exfiltrate, and resupply friendly forces around the world. The Talon I has recovered packages and people with the Fulton Recovery System in virtually every theater, and both aircraft have dropped every conceivable object off their ramps, from motorcycles to 15,000-pound bombs. Because of the capabilities of the versatile MC-130, and the extraordinary men and women who unselfishly support its mission of vital national importance, the future of Air Force Special Operations is secure.

The CPC exam is comprised of 150 multiple-choice questions. The test takes five hours and 40 minutes to complete, making it fairly rigorous. There are two breaks in the middle of the test. The CPC exam costs \$300 to take, but only \$260 if the test-taker is a member of the AAPC (annual dues are \$125 for individuals and \$70 for students). The CPC exam thoroughly tests a coder's grasp of the entire coding process, from medical terminology to code sets and beyond. Per the AAPC's website, the CPC exam covers 24 subject areas, including anesthesia, radiology, and medicine. You should recognize a number of these (like Evaluation and Management, or Radiology) as sections of the CPT code manual. Others, like Anatomy and Physiology, are parts of the coder's everyday skill set. You should note that the questions on the exam are not divided or identified by the topic they are related to. That is, questions on the CPC exam will test you on all of the above 24 fields of medical coding, but they won't outright say, "This is an anesthesia question." Instead they'll just ask you about anesthesia, or surgery, or human anatomy. During the test, you'll be presented with a number of test cases pertaining to the practice of coding. These test case questions will present you with a condensed medical report and ask you to select the correct set of codes from the answers below. For instance, a test case question might read: "Sarah, a 45-year-old patient, visits the doctor and presents symptoms including a sore throat, swollen lymph nodes, and a fever. After performing a rapid strep test, the doctor confirms a diagnosis of streptococcal sore throat. The doctor prescribes an Amoxicillin as an antibiotic. Which of the following are the correct codes for this diagnosis, procedure and prescription?" There are also general knowledge questions, like "Which types of joints are synovial?" that don't have an attached test case. That question's related to the musculoskeletal system, but the test won't come right out and say so. You'll have to rely on your knowledge of code sets, medical terminology, best practices, and the coding process in general to pass. Individuals who earn a score of 70 percent or better (105 correct questions) will pass the CPC exam. If you fail your first test, you are allowed one free retake. GETTING CERTIFIED Once you pass the CPC exam, you are not officially certified by the AAPC until you fulfill a few other criteria. In order to complete a CPC certification, you must become a member of the AAPC. Certification is also limited to coders with two years of professional experience or those willing to complete an apprentice program. As such, the CPC exam is recommended for individuals who have already started their coding career. That won't prevent us from going over the basics of this important exam.
