The Telecom Handbook

With a veteran's eye for the harsh and gritty details of war, David Drake depicts a futuristic analog of Vietnam-era tank combat in his Hammer's Slammers fiction. Upon this tactical foundation, Drake uses historical metaphor to provide a rich and detailed future-history that is both unique and strangely familiar. The characters that make up the Hammer's Regiment are neither cartoon heroes nor propaganda villains; rather they are competent professionals engaged in a deadly business. The inevitable conflicts between policy, necessity, and human nature are often at the forefront of the Slammers narratives, and it is this rich fusion of elements that makes Drake's Slammers fiction instantly identifiable and utterly compelling. The Hammer's Slammers series is some of the most important and influential work in military SF. The Vietnam War made indelible marks on the science fiction genre, and Drake's service with the Blackhorse regiment during the war gives his fiction a unique perspective. It is this perspective that is sometimes lacking in military SF, and one that makes Drake's work so important to the science fiction genre as a whole. This three-volume set collects all the Slammers short fiction and novels into a set of uniform editions, and presents a new, previously uncollected piece of fiction in each volume. This first volume collects the existing short fiction, along with the background material from the original Slammers collection. The new story in this volume, "A Death in Peacetime," chronicles an important event in the Hammer's Regiment history... an event that has been implied, but never fully explained... until now.

With wit and humor, popular Lost Cities author David Hatcher Childress takes us around the world and back in his trippy final book to the Lost Cities series. He's off on an adventure in search of the apocalypse and end times. Childress hits the road

from the fortress of Megiddo, the legendary citadel in northern Israel where Armageddon is prophesied to start. Hitchhiking around the world, Childress takes us from one adventure to another, to ancient cities in the deserts and the legends of worlds before our own. Childress muses on the rise and fall of civilizations, and the forces that have shaped mankind over the millennia, including wars, invasions and cataclysms. He discusses the ancient Armageddons of the past, and chronicles recent Middle East developments and their ominous undertones. In the meantime, he becomes a cargo cult god on a remote island off New Guinea, gets dragged into the Kennedy Assassination by one of the “conspirators,” investigates a strange power operating out of the Altai Mountains of Mongolia, and discovers how the Knights Templar and their off-shoots have driven the world toward an epic battle centered around Jerusalem and the Middle East.

Notes from the Hyena's Belly

J. D. Bernal's monumental work, Science in History, was the first full attempt to analyse the reciprocal relations of science and society throughout history, from the

perfection of the flint hand-axe to the hydrogen bomb. In this remarkable study he illustrates the impetus given to (and the limitations placed upon) discovery and invention by pastoral, agricultural, feudal, capitalist, and socialist systems, and conversely the ways in which science has altered economic, social, and political beliefs and practices. In this first volume Bernal discusses the nature and method of science before describing its emergence in the Stone Age, its full formation by the Greeks and its continuing growth (probably influenced from China) under Christendom and Islam in the Middle Ages. Andrew Brown, Bernal's biographer, with a nice sense of paradox, has said of him, he 'was steeped in history, in part because he was always thinking about the future.' He goes on to say, 'Science in History is an encyclopaedic, yet individual and colourful account of the emergence of science from pre-historic times. There is detailed coverage of the scientific revolution of the Enlightenment, the Industrial Age and the first two-thirds of the twentieth century. . . The writing flows and is devoid of the tortured idioms that mar so many academic histories of science. After reading it, it is easy to agree with C. P. Snow's orotund observation that Bernal was the last man to know science. Faber Finds are reissuing the illustrated four volume edition first published by Penguin in 1969. The four volumes are: Volume 1: The Emergence of Science, Volume 2: The Scientific and Industrial Revolutions, Volume 3: The Natural Sciences in Our Time, Volume 4: The Social Sciences: Conclusion. 'This stupendous work . . . is a magnificent synoptic view of the rise of science and its impact on society which leaves the reader awe-struck by Professor Bernal's encyclopaedic

knowledge and historical sweep.' Times Literary Supplement

Life's Operating Manual

Tom Shadyac is a storyteller. For over 25 years he was one of the top directors in Hollywood, producing some of its highest grossing comedies. However, after his world was rocked by a health condition, he began to consider his purpose, realising an intense need to live life with greater authenticity. Just about everything today comes with an operating manual - from your computer to your car, from your mobile phone to your iPad. Is it possible that Life comes with an operating manual,

as well? That's the simple, but powerful premise of Tom Shadyac's inspiring and provocative first book. Written as a series of essays and dialogues, we are invited into a conversation that is both challenging and empowering. The question now is, can we discern what is written inside of this operating manual and garner the courage to live in accordance with its precepts? A Native American myth tells of two wolves that live inside each of us, two wolves engaged in a fierce battle for control of our lives. One wolf, the fearful wolf, walks in anger, ego, envy, greed, resentment and lies. The other wolf, the truthful wolf, lives in appreciation, kindness, love, joy, compassion, and empathy. Life's Operating Manual is expressed as a series of dialogues between the two wolves of fear and truth, with Tom reflecting on the life experiences that led him to these deep internal meditations. Authentic, direct and profound, Life's Operating Manual is an unexpected gift to any spiritual seeker.

Java Programming: A Comprehensive Introduction

Introduction Sales is first and foremost the art of persuasion. A salesperson persuades someone to part with his or her money in exchange for a product or service. This is done by convincing the customer that he wants the product or service more than he wants his own money. Often this is a formidable task because the goods and services offered by professional salespeople usually cost a lot of money. The good news for the salesperson is that the approach used can

significantly improve the odds of success. Like any profession, a sales job becomes a lot easier once you learn the tricks of your trade. I believe that how well a salesperson learns the tricks of the trade can have a big effect on his success, income and career. The degree of success can also affect the salespersons happiness, family life and sense of self-worth. I am convinced that learning these tricks can be financially rewarding and prudent for any salespersons career. Perhaps Wesley Autrey, a New York construction worker, understood achievement best when he simply said; Good things happen when you do good. This book is designed to help you do a good job at selling people things. It describes, explains, and provides examples of the best tricks of the trade I have used in the real world for over twenty-five-years in my sales career. Several (but not all) tricks of the trade require specific rhetorical techniques. In those cases, I will explain the recommended rhetorical procedure as well. When needed, I will explain what questions a salesperson should ask, when to ask these questions, and why we ask these particular questions. I will explain not only the tricks of the trade but I will explain when and why we use specific tricks. I will also do my best to explain how and why these tricks actually work. All the tricks will work for most products and services sales professional typically are asked to sell. They work for inside salespeople as well as outside sales representatives. I have years of experience in both types of sales and the tricks in this book are important and valuable regardless of your sales environment. My own career attests to how well these tricks of the trade can succeed. Because I have used them while working for some

of the largest corporations in America, I have frequently won incentive trips to wonderful resorts in the United States as well as those in Cancun, the Bahamas and even Europe. My goal in this book is to suggest ways in which salespeople at any stage of their careers can improve their techniques, hone their strategies, and ultimately, succeed more fully in sales. Vernon Law once warned: Experience is the worst teacher; it gives the test before presenting the lesson. In this book I am going to try to change the natural order of things. This book is designed to give you the lessons first, thereby leveling the playing field between rookies and experienced salespeople. The way I am going to do that is by letting out the secrets I have learned in the real world to everybody in this book. Over the course of my career, I have been to several conferences set up to train the beginning salesperson. This book takes what I have learned in those classes to a more advanced level with concrete suggestions based on my years of actual sales experience. As a result, this book is designed to benefit both novice and experienced salespeople. While each chapter focuses on a different fundamental principle of selling, I also give a very practical spin to what else---in addition to fundamentals---salespeople should understand. This book explains not only how to make a great presentation but all the other things you need to know to be an effective salesperson. Let me give you an example of the type of insight you can expect to gain by reading this book. Usually the first thing a new salesperson receives is training on how to explain what eventually he is supposed to be selling. This includes a detail

Travel's gender politics is analyzed in the works of J.-J. Rousseau, Mary Wollstonecraft, Stéphanie-Félicité de Genlis, Germaine de Staël, Frances Burney, Flora Tristan, Suzanne Voilquin, Gustave Flaubert George Sand, Robyn Davidson, and Sara Wheeler.

WINNER of the ChessCafe 2008 Book of the Year Award SHORTLISTED for The Guardian 2008 Chess Book of the Year Award Why is it that the human brain so often refuses to consider winning chess tactics? Every chess fan marvels at the wonderful combinations with which famous masters win their games. How do they find those fantastic moves? Do they have special vision? And why do computers outwit us tactically? Forcing Chess Moves proposes a revolutionary method for finding winning moves. Charles Hertan has made an astonishing discovery: the failure to consider key moves is often due to human bias. Your brain tends to disregard many winning moves because they are counter-intuitive or look unnatural. It's a fact of life: computers outdo us humans when it comes to tactical vision and brute force calculation. So why not learn from them? Charles Hertan's radically different approach is: use COMPUTER EYES and always look for the most forcing move first. By studying forcing sequences according to Hertan's method you will: Develop analytical precision Improve your tactical vision Overcome human bias and staleness Enjoy the calculation of difficult positions Win more games by recognizing moves that matter. This New and Extended Fourth Edition of

Hertan's award-winning modern classic includes 50 extra pages with new and instructive combinations. There is a foreword by three-time US chess champion Joel Benjamin, and a special foreword to this new edition by Swedish Grandmaster Pontus Carlsson.
