Occupational Therapy with Aging Adults

"The Kawa (Japanese for river) model uses a familiar metaphor of nature as an effective medium to translate subjective views of self, life, well-being and the meanings of occupations. The familiarity of the metaphor - to both therapists and clients alike - and the ease with which its framework can be comprehended and applied makes this model an effective and highly relevant tool for an increasingly diverse global clientele." "The Kawa Model will challenge occupational therapy students, practitioners, educators and researchers to comprehend their theory in a critical light and consider how to advance their practice and profession toward a more inclusive and meaningful direction."--BOOK JACKET.

Case studies, practical illustrations and examples of research demonstrate the practical application of occupational therapy. At the end of each chapter, a Conclusion and Reflections section aims to provoke discussion, aided by the author's personal reflections.

Occupational Therapy for Child and Adolescent Mental Health

This book examines the occupational therapy paradigm (its focal viewpoint, core constructs, and values) as well as the role of complexity/chaos theory as a scientific framework for occupational therapy research and practice. Unlike other current OT texts, this book uses clinical case examples to illustrate application of proposed changes to make procedures consistent with the latest Occupational Therapy Practice Framework. The reader walks away with a clear grasp of the theoretical principles guiding his or her treatment interventions, the explanations behind those principles, and the applicable intervention for said techniques and procedures. An emphasis on clinical-reasoning skills, including information on different types of reasoning skills as well as the MAPP model of teaching helps the student and clinician translate theoretical principles into practice. The section on specific interventions addresses each of the conceptual practice models according to a consistent chapter template, which enables the reader to apply conceptual practice models in real-world contexts. Preview questions at the beginning of each chapter alert the reader to important concepts in the upcoming text. Critical analysis of the theoretical core provides suggested modifications to increase consistency with the new occupational therapy paradigm.

The Evaluative Process in Psychiatric Occupational Therapy

Three out of four people addicted to heroin probably started on a prescription opioid, according to the director of the Centers for Disease Control and Prevention.

In the United States alone, 16,000 people die each year as a result of prescription opioid overdose. But perhaps the most frightening aspect of the prescription drug epidemic is that it's built on well-meaning doctors treating patients with real problems. In *Drug Dealer, MD*, Dr. Anna Lembke uncovers the unseen forces driving opioid addiction nationwide. Combining case studies from her own practice with vital statistics drawn from public policy, cultural anthropology, and neuroscience, she explores the complex relationship between doctors and patients, the science of addiction, and the barriers to successfully addressing drug dependence and addiction. Even when addiction is recognized by doctors and their patients, she argues, many doctors don't know how to treat it, connections to treatment are lacking, and insurance companies won't pay for rehab. Full of extensive interviews—with health care providers, pharmacists, social workers, hospital administrators, insurance company executives, journalists, economists, advocates, and patients and their families—*Drug Dealer, MD*, is for anyone whose life has been touched in some way by addiction to prescription drugs. Dr. Lembke gives voice to the millions of Americans struggling with prescription drugs while singling out the real culprits behind the rise in opioid addiction: cultural narratives that promote pills as quick fixes, pharmaceutical corporations in cahoots with organized medicine, and a new medical bureaucracy focused on the bottom line that favors pills, procedures, and patient satisfaction over wellness. Dr. Lembke concludes that the prescription drug epidemic is a symptom of a faltering health care system, the solution for which lies in rethinking how health care is delivered.

The Kawa Model

Of the estimated 70 million children in the United States, 6 million to 9 million have a serious emotional disturbance. However, only 1 in 5 of these children receives any professional help. Over the years, the view of children's mental health services has changed. This new thinking has altered how occupational therapy services are perceived and implemented. In addition to providing services to children diagnosed with a mental illness, occupational therapy professionals can help children develop and maintain mental health in school, community, and mental health settings. Using an evidence-based perspective and public health model, this Practice Guideline provides an overview of the occupational therapy process for mental health promotion, prevention, and intervention for children ages 3 to 21 years. It defines the occupational therapy domain, process, and interventions that occur within the boundaries of acceptable practice with this underserved population. Interventions include those for promotion, prevention, and intensive individualized care on topics such as social skills, health promotion, play/recreation/leisure, and cognitive-behavioral therapy.

Psychiatric Occupational Therapy in the Army

Effective group leadership techniques are the focus of this practical, sound volume. Dedicated to assisting occupational therapy practitioners and students in understanding current theory and state-of-the-art techniques in group treatment, this functional book fills the gap left by existing literature and educational programs that focus mainly on diagnoses and task analysis. Highly skilled professionals examine the important concepts of group therapy--structural elements, such as goals, norms, group size, physical environment, and instructions that can be varied depending on the purpose, needs, and functional level of the client; the ability to guide and control process elements, such as spontaneous feedback; and the ability to support clients and help build a cohesive, safe group. Fascinating examples of innovative new group techniques--social skills game, mime group, and the use of robots--demonstrate how creative content can effectively combine structure and process in group treatment.
