Teaching Maths

The crisis around teaching and learning of mathematics and its use in everyday life and work relate to a number of issues. These include: The doubtful transferability of school maths to real life contexts, the declining participation in A level and higher education maths courses, the apparent exclusion of some groups, such as women and the aversion of many people to maths. This book addresses these issues by considering a number of key problems in maths education and numeracy: *differences among social groups, especially those related to gender and social class *the inseparability of cognition and

emotion in mathematical activity *the understanding of maths anxiety in traditional psychological, psychoanalytical and feminist theories *how adults' numerate thinking and performance must be understood in context. The author's findings have practical applications in education and training, such as clarifying problems of the transfer of learning, and of countering maths anxiety.

A General Bibliography of the Gambia

GCE O Level Examination Past Papers with Answer Guides: Maths India Edition

This book presents a rudimentary exposure to the field of educational research and an attempt to allay the unwarranted fear of those who perceive research as a highly technical and complex scholarly activity carried out by persons in the sciences. The author takes the position that anyone can do research and that it can be an interesting and very worthwhile experience. Educational research, particularly action research, which the author emphasizes, is an invaluable exercise about which everyone in education should be knowledgeable or at least be familiar. Starting with an explication of some salient concepts in the study of research (e.g., research, educational research, research problem v. research topic, hypothesis, experimental v. non-experimental research), the book takes the reader through the process of conducting a research problem from problem selection and statement, significance, review of literature, methodology, data analysis, findings to recommendations and conclusions. Detailed descriptions of the American Psychological Association (APA) style of referencing with ample examples are provided. The book is written in simple language so that even high school students will be able to acquire a fairly good understanding of each contents. Though the primary target population is undergraduate students of education, the contents are broad enough to provide a guide for students in other disciplines, as well as whet the appetite of the general reader who seeks only a basic knowledge of research and/or educational research.
