Pediatric Nursing: Caring for Children and Their Families

Caring for ill children is always challenging, but technological advances, reforms in health care and cost control efforts have made caring for these children increasingly complex. More and more, care occurs in ambulatory, outpatient and home settings, often with the family playing a large role. Pediatric Nursing: Caring for Children and Their Families approaches the topic of children's healthcare from a family-centered and holistic perspective, viewing children not just as patients, but as evolving human beings. Focus is placed on anticipatory guidance nursing professionals can give to families related to developmental milestones, health concerns and health promotion strategies specific to each stage of development. Traditional areas of assessment, disease processes and health promotion are examined within the context of contemporary social and cultural influences. Caring for Children and Their Families facilitates the development of sensitivity and critical thinking skills today's undergraduate nursing student and tomorrow's nurse will need to meet the challenges of pediatric healthcare.

Pediatric Nursing Made Incredibly Easy

Pediatric respiratory disorders are responsible for a number of acute and chronic health conditions and are a leading cause of pediatric emergency room visits and hospitalizations. More than ever, nurses and nurse practitioners must have an understanding of the anatomy, pathophysiology, diagnosis and state of the art treatments in pediatric respiratory disease as they are often the first to come in contact with and recognize respiratory problems in children. Nursing Care in Pediatric Respiratory Disease seeks to provide both nurses and nurse practitioners with this information in order to aid them in the diagnosis and treatment of children suffering from acute and chronic respiratory disorders. Nursing Care in Pediatric Respiratory Disease opens with an overview of the anatomy and physiology of the respiratory system, best practices for assessing respiratory symptoms in children, and common respiratory therapies and treatment methods. It then proceeds through an examination of varying acute and chronic upper and lower respiratory diseases spanning from asthma and cystic fibrosis to vocal cord paralysis and sinusitis in both hospital and ambulatory settings. Nursing Care in Pediatric Respiratory Disease provides nurses and other health care providers with a comprehensive and practical resource which allows them to collaborate and advocate more effectively, as well as educate both the family and child in management of respiratory disorders.

This book reflects the cumulative work of two previous iterations and includes their complete text. It is a foundational volume that articulates the essentials of this specialty, its accountabilities and activities - the who, what, when, where, and how of its practice - for both specialists and generalists. The 16 standards themselves - those by which all nurses in this specialty practice and their practice competencies measured and evaluated - are grounded in the perspectives and priorities of pediatric nursing and form the core of the book. The book's extensive scope of practice discussion - of its characteristics, development and trends, education and training, its practice environments and settings, its general and specialized practice roles, its ethical and conceptual bases - lends a broad context for understanding and using these standards. Although this reference and guide is mainly for practicing nurses and nursing faculty and students, Pediatric Nursing: Scope and Standards of Practice is also an essential source document for other pediatric specialists, healthcare providers, researchers, and scholars.
