Living in the Environment

This Intergovernmental Panel on Climate Change Special Report (IPCC-SREX) explores the challenge of understanding and managing the risks of climate extremes to advance climate change adaptation. Extreme weather and climate events, interacting with exposed and vulnerable human and natural systems, can lead to disasters. Changes in the frequency and severity of the physical events affect disaster risk, but so do the spatially diverse and temporally dynamic patterns of exposure and vulnerability. Some types of extreme weather and

climate events have increased in frequency or magnitude, but populations and assets at risk have also increased, with consequences for disaster risk. Opportunities for managing risks of weather- and climate-related disasters exist or can be developed at any scale, local to international. Prepared following strict IPCC procedures, SREX is an invaluable assessment for anyone interested in climate extremes, environmental disasters and adaptation to climate change, including policymakers, the private sector and academic researchers.

The authors perceive a trend in the study and practice of groundwater hydrology. They see a science that is emerging from its geological roots and its early hydraulic applications into a full-fledged environmental science. They see a science that is becoming more interdisciplinary in nature and of greater importance in the affairs of man. This book is their response, and they have provided a text that is suited to the study of groundwater during this period of emergence.

Social Group Work: a Helping Process

When Lovelock published his 'Gaia', it was for many people quite a relief. We would not be able to destroy life on earth. Lovelock illustrated this argument with a wealth of mechanistic feedback processes, as we know them to occur in ecosystems. These feedback processes would, somehow, lead the earth as a whole into a new equilibrium. An equilibrium with life within, be it in an entirely changed environment. This is, indeed, let us be earnest: a functioning ecosystem. But what kind of ecosystem? The Gaia-hypothesis triggered a great deal of thought and discussion about what we actually require as an environment. Bio diversity as an abbreviation of biotic diversity has since become the focal point of societal concern. But again, when we think about it, we are not only interested in the sheer number of species on earth. We also have 'other interests: nearby, in our backyards, in the surrounding countryside, and on the various locations where we would like to spend our holidays. We also want to preserve rare or characteristic species just for their own sake. In fact, we want species in viable populations to be part of communities that are self-maintaining in environments where they belong. We know we cannot ask for this without protecting their environment, which is also our environment. This is where the next fashionable term emerges: sustainability.

Behavior Analysis and Treatment

In May 1986, the Association for Behavior Analysis (ABA) established a task force on the right to effective behavioral treatment. The mandate of this task force was to identify and delineate specific rights as they apply to behavioral treatment. Impetus for this project came in part from the controversy over the use of aversive procedures, which some held had no place in treatment and, with evolution of the treatment process, were no longer necessary. In contrast, others cited evidence that programs based on positive reinforcement alone were sometimes not effective in treating severe problems. These researchers and practitioners desired to ensure that clients and guardians be permitted to choose treatments that included punishment procedures when assessments warranted their use. The first editor approached Ogden Lindsley, president of ABA, about establishing a task force to examine this issue. The ABA council decided to broaden the mandate to include an examination of clients' right to effective behavioral treatment in general. The first editor was asked to chair the task force and appointed Saul Axelrod, Jon S. Bailey, Judith E. Favell, Richard M. Foxx, and O. Ivar Lovaas as members. Brian A. Iwata was appointed liaison by the ABA council.

For many students with no science background, environmental geology may be one of the only science courses they ever take. Living With Earth: An Introduction to Environmental Geology is ideal for those students, fostering a better understanding of how they interact with Earth and how their actions can affect Earth's environmental health. The informal, reader-friendly presentation is organized around a few unifying perspectives: how the various Earth systems interact with one another; how Earth affects people (creating hazards but also providing essential resources); and how people affect Earth. Greater emphasis is placed on environment and sustainability than on geology, unlike other texts on the subject. Essential scientific foundations are presented - but the ultimate goal is to connect students proactively to their role as stakeholders in Earth's future.
