## The Concise Book of Trigger Points

### Nature's Finer Forces

Herodotus's Account of Egypt is the second book of the Histories, which contains descriptions of the marvels of the south: the size of the land, the wonders of the Nile, the religious ceremonies which will be as fascinating to the modern reader as it was to the ancient. From the priests at Memphis, Heliopolis, and the Egyptian Thebes he learned what he reports of the size of the country, the wonders of the Nile, the ceremonies of Egyptian religion, their sacred animals, the Crocodile and the Phoenix, their funerals and embalming, lotus and papyrus eating, the great kings and queens, and of the pyramids. Keep in mind that to Herodotus and the ancient Greeks, Egypt essentially was Africa - primitive maps show an ocean on all sides of the mysterious land to the south; so to understand this place was to know much of the world.

### Life's Little Instruction Book

A French Genocide: The Vendée provides a detailed narrative of the civil war in the Vendée region of western France, which lasted for much of the 1790s but was most intensely fought at the the height of the Reign of Terror, from March 1793 to early 1795. In this shocking and controversial book, Reyanld Secher argues that the massacres which resulted from the conflict between patriotic revolutionary forces and those of the counter-revolution were not the inevitable result of fierce battle, but rather were premeditated, committed in cold blood, massive and systematic, and undertaken with the conscious and proclaimed will to destroy a well-defined region, and to exterminate and entire people. Drawing upon previously unavailable

sources, Secher argues that more than 14 percent of the population and 18 percent of the housing stock in the Vendée was destroyed in this catastrophic conflict. Secher's review of the social and political structure of the region presents a dramatically different image of the people on the Vendée than the stereotype common among historians favorable to the French Revolution. He demonstrates that they were not archaic and superstitious or even necessarily adverse to the forward-looking forces of the Revolution. Rather, the region turned against the Revolution because of a series of misguided policy choices that failed to satisfy the desire for reform and offended the religious sensibilities of the Vendéans. Using an array of primary sources, many from provincial archives, including personal accounts and statistical data, Secher convincingly argues for a demythologized view of the French Revolution. Contrary to most twentieth-century academic accounts of the Revolution, which have either ignored, apologized for, or explained away the Vendée, Secher demonstrates that the vicious nature of this civil war is a key element that forces us to reconsider the revolutionary regime. His work, available for the first time in English, provides a significant case study for readers interested in the relationships between religion, region, and political violence.

## **On the War for Greek Freedom**

This edition is the most updated since its inception, is the essential text for students and professionals working in and around epidemiology or using its methods. It covers subject areas - genetics, clinical epidemiology, public health practice/policy, preventive medicine, health promotion, social sciences and methods for clinical research.

## **Engineering Asset Management**

Continuing the tradition of excellence, each chapter has been updated and reformatted for easier access to the information the reader needs. This edition has a two-color design, color tabs for sections, and additional algorithms for diagnosis and treatment.

In "The Devil's Diaries," Monty Python meets Bridget Jones with a little more fire and a lot more brimstone. In his own words, Satan muses on key dates throughout history--reveling in his role as the mastermind behind the Fall, rock 'n' roll, Y2K, and, of course, global warming. The Dark One grumbles at the way some of his best work has been hijacked and credited elsewhere, and confesses his frustration that many of his efforts go unappreciated. Even Satan falls in love, goes on vacation, suffers from depression, and deserves a little sympathy from time to time. The book is funny as . . . well, you know. In five sections reflecting the main epochs of his reign--with such titles as "Pride Comes Before the Fall" and "The Good Old Days (The Dark Ages)"--the Devil's revelations cover everything from the Fall to--er--Revelations. Through more than 150 pages of dazzling (and, of course, diabolical) words and illustrations, we can take devilish delight in these topics and many, many more:

Trusted by generations of residents and practitioners, The Harriet Lane Handbook remains your first choice for fast, accurate information on pediatric diagnosis and treatment. The first medical reference book written "by residents, for residents" and reviewed by expert faculty at The Johns Hopkins Hospital, it continues to provide the gold standard in point-of-care clinical information for any health care professional treating pediatric patients. Consult this title on your favorite e-reader, conduct rapid searches, and adjust font sizes for optimal readability. Take advantage of the most dependable drug information available with thoroughly updated, one-of-a-kind Pediatric Formulary providing the standard of pediatric care from the leading pediatric hospital in the world. Trust thoroughly updated content that includes parameters for pediatric and neonatal septic shock; guidelines for acute management of severe traumatic brain injury; a convenient table detailing common genetic tests; a significantly extended collection of radiologic images; expanded mental health coverage; plus much more. Access information easily and quickly with reformatted sections designed make the book easier to use via mobile device.

## **A Dictionary of Epidemiology**

This edition of the Manual of Neonatal Care has been completely updated and extensively revised to reflect the changes in fetal, perinatal, and neonatal care that have occurred since the sixth edition. This portable text covers current and practical approaches to evaluation and management of conditions encountered in the fetus and the newborn, as practiced in high volume clinical services that include contemporary prenatal and postnatal care of infants with routine, as well as complex medical and surgical problems. Written by expert authors from the Harvard Program in Neonatology and other major neonatology programs across the United States, the manual's outline format gives readers rapid access to large amounts of valuable information quickly. The Children's Hospital Boston Neonatology Program at Harvard has grown to include 57 attending neonatologists and 18 fellows who care for more than 28,000 newborns delivered annually. The book also includes the popular appendices on topics such as common NICU medication guidelines, the effects of maternal drugs on the fetus, and the use of maternal medications during lactation. Plus, there are intubation/sedation guidelines and a guide to neonatal resuscitation on the inside covers that provide crucial information in a quick and easy format.

The latest in a highly regarded series, this volume presents for the first time an authoritative and systematic account of the coins minted in the Roman provinces from the accession of Nerva in AD 96 to the death of Hadrian in AD 138. The book gives a complete picture of the material, thereby not only meeting the needs of numismatists but also providing an essential reference for historians,

archaeologists and other students of the Roman Empire.

2016 BMA Medical Book Awards Highly Commended in the Medicine Category! What causes that condition? What does it mean? Organised by body system, Mechanisms of Clinical Signs, 2nd Edition explains the underlying mechanism and value of the clinical signs you are expected to know, and the conditions they indicate. Each chapter contains descriptions of clinical signs, a list of the conditions they are associated with (what conditions the signs indicate), an explanation of the mechanism and the 'value' of those signs (how reliable they are as an indication of a condition). There is a uniform set of subheadings for each sign: Description Condition/s associated with Mechanism/s Sign value The explanations for the mechanisms underlying each sign are brief but accurate and informative, and provide sufficient information for the reader to understand the mechanism: Signs are ordered alphabetically within each chapter outlining a specific body system. Extensive reference lists of up-to-date literature strengthen the authority of the content. Video and audio content presents real life evaluation scenarios of clinical signs. Clinical Pearls highlight the main signs which students and trainees should look out for to help them identify conditions with which the patients present. A Student Consult eBook is available with the purchase of a print book, and provides access to a total of 200 multiple choice questions covering the 7 body systems, to test students and trainees' knowledge of the content. The eBook contains links to audio and video examples of particular signs which have to be heard or observed over a period of time in order to be identified correctly, e.g. Agonal respiration in Chapter 2 Respiratory Signs. New images are added to depict clinical signs where no images were present in the previous edition.

## **The Inscription in the 'Du Khang of Dgung 'phur Monastery, Spu Rang (Mnga' Ris)**

It seems as if the fundamentals of how we produce vowels and how they are acoustically represented have been clarified: we phonate and articulate. Using our vocal chords, we produce a vocal sound or noise which is then shaped into a specific vowel sound by the resonances of the pharyngeal, oral, and nasal cavities, that is, the vocal tract. Accordingly, the acoustic description of vowels relates to vowelspecific patterns of relative energy maxima in the sound spectra, known as patterns of formants. The intellectual and empirical reasoning presented in this treatise, however, gives rise to scepticism with respect to this understanding of the sound of the vowel. The reflections and materials presented provide reason to argue that, up to now, a comprehensible theory of the acoustics of the voice and of voiced speech sounds is lacking, and consequently, no satisfying understanding of vowels as an achievement and particular formal accomplishment of the voice exists. Thus, the question of the acoustics of the vowel - and with it the question of the acoustics of the voice itself - proves to be an unresolved fundamental problem.

In *Four Practical Revolutions in Management: Systems for Creating Unique Organizational Capability*, authors Shoji Shiba and David Walden significantly revise their classic text on leading management systems -- *A New American TQM*. This book is a comprehensive approach to business management that goes beyond business operations improvement. The authors demonstrate a program for establishing a sophisticated, state-of-the-art management system that creates unique organizational capabilities. Containing new methodologies and case studies, the book is one of the most extensive in the management field and provides a step-by-step program for implementing leading management techniques. To create a successful management system, the authors argue that companies must be organized around four major areas of practice called the "four revolutions." They are customer focus, continuous improvement, total participation, and societal networking. For each of the areas, the book presents proven methods that enable dynamic implementation strategies. Customer Focus Any effective management system begins with the customer. Companies must learn to integrate a customer's concerns into their own. The book presents how to embrace the "market-in" concept and integrate the other skills in the book into a management strategy that focuses on the customer. Continuous Improvement For a company to be successful in the 21st century, it must continually improve its processes to meet the ever-changing needs of the customer. This book introduces important tools for process discovery, management, and improvement. In the process, it moves beyond "reactive improvement" methods to "proactive improvement" efforts. Total Participation The key to creating a dynamic management system is employee participation. Employees are the ones who work on the issues of quality and customer satisfaction on a daily basis. This book presents skills such as hoshin management, team-building, creating structures for mobilization, and leading change and breakthrough. Societal Networking Besides a company's internal audience, another source of business improvement ideas is societal networking. This is the set of companies, customers, and suppliers associated with any organization, that can learn from the experiences of these groups. To develop these valuable resources into a comprehensive management strategy, the book covers "mutual learning" methods, as well as keys for integrating various management methodologies. This book includes: Hoshin

management PDCA (plan, do, check, act) cycle 7-step method of reactive improvement Proactive improvement to develop new products Engaging people in a changing environment Focused strategies for phase-in Leading process improvement The practice of breakthrough Over thirty thorough case studies

The Washington Manual of Critical Care is a concise pocket manual for physicians and nurses. It is distinguished from the multitude of other critical care handbooks on the market by its consistent presentation of algorithms displaying the decision-making pathways used in evaluating and treating disorders in the ICU. The new edition transitions to a full color format and will include coverage of Deep Venous Thrombosis/Pulmonary Embolism, fetal-maternal critical care, C difficile infection, and alternative hemodynamic monitoring.

## **The Correspondence of Wolfgang Capito**

This book will serve as a primer for both laboratory and field scientists who are shaping the emerging field of molecular epidemiology. Molecular epidemiology utilizes the same paradigm as traditional epidemiology but uses biological markers to identify exposure, disease or susceptibility. Schulte and Perera present the epidemiologic methods pertinent to biological markers. The book is also designed to enumerate the considerations necessary for valid field research and provide a resource on the salient and subtle features of biological indicators.

"Artistic media seem to be in a permanent condition of mutation and transformation. Contemporary artists often investigate the limits and possibilities of the media they use and experiment with the crossing, upgrading and mutilation of media. Others explicitly explore the unknown intermedial space between existing media, searching for the hybrid beings that occupy these in-betweens. This issue of Theater topics explores the theme of mutating and adapting media in its relation with theatre and performance"--P. [4] of cover.

## **Bastard Or Playmate?**

Thinking Literature across Continents finds Ranjan Ghosh and J. Hillis Miller—two thinkers from different continents, cultures, training, and critical perspectives—debating and reflecting upon what literature is and why it matters. Ghosh and Miller do not attempt to formulate a joint theory of literature; rather, they allow their different backgrounds and lively disagreements to stimulate generative dialogue on poetry, world literature, pedagogy, and the ethics of literature. Addressing a varied literary context ranging from Victorian literature, Chinese literary criticism and philosophy, and continental philosophy to Sanskrit poetics and modern European literature, Ghosh offers a transnational theory of literature while Miller emphasizes the need to account for what a text says and how it says it. Thinking Literature across Continents highlights two minds continually discovering new paths of communication and two literary and cultural

traditions intersecting in productive and compelling ways.

"The coast is one of our most valuable assets but how is it being treated and what is being done to look after it? Coastal Management in Australia is the first book to provide a comprehensive overview of this important subject. Interesting case studies are used to illustrate human impact on coastal processes as well as demonstrating the global significance of the coast and the international imperative to manage it properly. Coastal Management in Australia introduces the background to the various coastal management systems operating in Australia and illustrates these with 'real world' examples from the different states and territories. Since this book was first published yet another parliamentary inquiry has been added to some 30 years of national inquiries into coastal management, with further calls for national co-ordination. In addition, the Australian government has focused attention on the potential risks of climate change for the Australian coast. Both authors have national and international coastal expertise; significant academic teaching experience in coastal processes and coastal management; coastal planning and policy skills; and have extensive government expertise in coastal management"--Publisher's description.

## **An Account of Egypt**

In the past, foreign shocks arrived to national economies mainly through trade channels, and transmissions of such shocks took time to come into effect. However, after capital globalization, shocks spread to markets almost immediately. Despite the increasing macroeconomic dangers that the situation generated at emerging markets in the South, nobody at the North was ready to acknowledge the pro-cyclicality of the financial system and the inner weakness of “decontrolled” financial innovations because they were enjoying from the “great moderation.” Monetary policy was primarily centered on price stability objectives, without considering the mounting credit and asset price booms being generated by market liquidity and the problems generated by this glut. Mainstream economists, in turn, were not majorly attracted in integrating financial factors in their models. External pressures on emerging market economies (EMEs) were not eliminated after 2008, but even increased as international capital flows augmented in relevance thereafter. Initially economic authorities accurately responded to the challenge, but unconventional monetary policies in the US began to create important spillovers in EMEs. Furthermore, in contrast to a previous surge in liquidity, funds were now transmitted to EMEs throughout the bond market. The perspective of an increase in US interest rates by the FED is generating a reversal of expectations and a sudden flight to quality. Emerging countries’ currencies began to experience higher volatility levels, and depreciation movements against a newly strong US dollar are also increasingly observed. Consequently, there are increasing doubts that the “unexpected” favorable outcome observed in most EMEs at the aftermath of the Global Financial Crisis (GFC) would remain.

Marketing attempts to influence the way consumers behave. These attempts have implications for the organizations making the attempt, the consumers they are trying to influence, and the society in which these attempts occur. We are all consumers and we are all members of society, so consumer behavior, and attempts to influence it, are critical to all of us. This text is designed to provide an understanding of consumer behavior. This understanding can make us better consumer, better marketers, and better citizens. A primary purpose of this text is to provide the student with a usable, managerial understanding of consumer behavior.-Pref.

Wolfgang Capito (1478–1541), a leading Christian Hebraist and Catholic churchman who converted to Protestantism, was a pivotal figure in the history of the Reformation. After serving as a professor of theology in Basel and adviser to the archbishop of Mainz, he moved to Strasbourg, which became, largely due to his efforts, one of the most important centres of the Reformation movement after Wittenberg. This penultimate volume in the series is a fully annotated translation of Capito's existing correspondence covering the years 1532–36 and culminating in the Wittenberg Concord between the Lutheran and Reformed churches. The correspondence includes Capito's efforts, alongside those of his colleague Martin Bucer, to negotiate that compromise. Other letters deal with local, political, financial, and doctrinal questions, as well as Capito's personal life. The letters demonstrate the importance of Capito and his colleagues in providing advice in matters concerning the churches in southern Germany and Switzerland, but also regarding the evangelicals in neighbouring France. Milton Kooistra's annotation provides historical context by identifying classical, patristic, and biblical quotations as well as persons and places. Continuing in the tradition of rigorous scholarship established in Volume 1 and Volume 2, this volume provides crucial details on the evolution of Capito's thought and its contribution to the Reformation movement.

Petroleum Production Systems, Second Edition, is the comprehensive source for clear and fundamental methods for about modern petroleum production engineering practice. Written by four leading experts, it thoroughly introduces modern principles of petroleum production systems design and operation, fully considering the combined behavior of reservoirs, surface equipment, pipeline systems, and storage facilities. Long considered the definitive text for production engineers, this edition adds extensive new coverage of hydraulic fracturing, with emphasis on well productivity optimization. It presents new chapters on horizontal wells and well performance evaluation, including production data analysis and sand management. This edition features: A structured approach spanning classical production engineering, well testing, production logging, artificial lift, and matrix and hydraulic fracture stimulation; Revisions throughout to reflect recent innovations and extensive feedback from both students and colleagues; Detailed coverage of modern best practices and their rationales; Unconventional oil and gas well design; Many new examples and problems; Detailed data sets for three characteristic reservoir types: an undersaturated oil reservoir, a saturated oil reservoir, and a gas reservoir.

Written by experts from London's renowned Royal Free Hospital, Textbook of Plastic and Reconstructive Surgery offers a comprehensive overview of the vast topic of reconstructive plastic surgery and its various subspecialties for introductory plastic surgery and surgical science courses. The book comprises five sections covering the fundamental principles of plastic surgery, cancer, burns and trauma, paediatric plastic surgery and aesthetic surgery, and covers the breadth of knowledge that students need to further their career in this exciting field. Additional coverage of areas in which reconstructive surgery techniques are called upon includes abdominal wall reconstruction, ear reconstruction and genital reconstruction. A chapter on aesthetic surgery includes facial aesthetic surgery and blepharoplasty, aesthetic breast surgery, body contouring and the evolution of hair transplantation. The broad scope of this volume and attention to often neglected specialisms such as military plastic surgery make this a unique contribution to the field. Heavily illustrated throughout, Textbook of Plastic and Reconstructive Surgery is essential reading for anyone interested in furthering their knowledge of this exciting field. Empirical research is carried out in a cyclic way: approaching a research area bottom-up, data lead to interpretations and ideally to the abstraction of laws, on the basis of which a theory can be derived. Deductive research is based on a theory, on the basis of which hypotheses can be formulated and tested against the background of empirical data. Looking at the state-of-the-art in translation studies, either theories as well as models are designed or empirical data are collected and interpreted. However, the final step is still lacking: so far, empirical data has not lead to the formulation of theories or models, whereas existing theories and models have not yet been comprehensively tested with empirical methods. This publication addresses these issues from several perspectives: multi-method product- as well as process-based research may gain insights into translation as well as interpreting phenomena. These phenomena may include cognitive and organizational processes, procedures and strategies, competence and performance, translation properties and universals, etc. Empirical findings about the deeper structures of translation and interpreting will reduce the gap between translation and interpreting practice and model and theory building. Furthermore, the availability of more large-scale empirical testing triggers the development of models and theories concerning translation and interpreting phenomena and behavior based on quantifiable, replicable and transparent data.
