Rantoul and Chanute Air Force Base

Tort & insurance law journal

"This volume focuses on the social, cultural, and ecological consequences of a political economy of energy. A political economy of energy holds that an enduring hallmark of the current context is a reorganization of human society toward energy extraction and production. Limits to Terrestrial Extraction looks at the construction of society itself as an energy-harvesting "megamachine," the ecomodernist project of the latter half of the twentieth century and its disastrous environmental record, and mining Near Earth Objects to extract extraterrestrial resources. Each chapter explores a limit to terrestrial extraction- spatially, economically, or socially- finding

that business as usual cannot yield a different world. The authors eschew easy answers of natural resource management or discourses of wise use, instead offering critiques of market society and its constitutive drive to produce and waste energy. Overall, this volume establishes the existential stakes and scope of change that will be required to build a better world. This book will be of great interest to students and scholars of environmental political theory, as well as social scientists and humanities scholars who study the intersection of energy and society"--

Rantoul and the former Chanute Air Force Base are inseparably intertwined as primary players in a single historical narrative. Rantoul was first founded as an agriculturally based community in 1848 near an area known as Mink Grove. The settlement boomed with the coming of the Illinois Central Railroad in 1854; a railroad championed by the town's namesake, Robert Rantoul Jr. Disaster followed in 1899 and again in 1901 with devastating fires. Then, in 1917, a U.S. Army flying field was built on the outskirts of Rantoul. Named after the aviation pioneer Octave Chanute, Chanute Field, later Chanute Air Force Base, became a premier technical training facility. A mutually beneficial relationship quickly developed between these civilian and military establishments that would last for over 75 years. Chanute Air Force Base closed in 1993, ushering in yet another new era for the village of Rantoul.

HomeMade Modern

The Day the Universe Changed presents a sweeping view of the history of science, technology, and human civilization and examines the moments in history when a change in knowledge radically altered man's understanding of himself and the world around him. James Burke examines eight periods in history when our view of the world shifted dramatically: In the eleventh century, when extraordinary discoveries were made by Spanish crusaders. In fourteenth-century Florence, where perspective in painting emerged. In the fifteenth century, when the advent of the printing press shook the foundations of an oral society. In the sixteenth century, when gunnery developments triggered the birth of modern science. In the early eighteenth century, when hot English summers brought on the Industrial Revolution. In the battlefield surgery stations of the French revolutionary armies, where people first became statistics. In the nineteenth century, when the discovery of dinosaur fossils led to the theory of evolution. In the 1820s, when electrical experiments heralded the end of scientific certainty. Based on the popular television documentary series, The Day the Universe Changed is a bestselling history that challenges the reader to decide whether there is absolute knowledge to discover-or whether the universe is "ultimately what we say it is."
