Public Finance benefits from the combined efforts of Harvey Rosen's market-leading book and co-author Ted Gayer's research and government agency experience. This combination of experience is able to explain as clearly as possible how the tools of economics can be used to analyze government expenditure and tax policies. This new edition incorporates recent developments and along the way takes students to the frontiers of current research and policy. While the information presented is cutting

edge and reflects the work of economists currently active in the field, the approach makes the text accessible to undergraduates whose only prior exposure to economics is at the introductory level. All of the changes in the Tenth edition were made to further the authors' goal of providing students with a clear and coherent view of the role of government spending and taxation. The authors' years of policy experience have convinced themselves that modern public finance provides a practical and invaluable framework for thinking about policy issues. The goal is simple: to emphasize the links between sound economics and the analysis of real-world policy problems. Connect is the only integrated learning system that empowers students by continuously adapting to deliver precisely what they need, when they need it, and how they need it, so that your class time is more engaging and effective.

This solidly written book explains the elements of contemporary symbolic logic, and examines the ways in which it illuminates the structure of legal reasoning and clarifies various legal problems. Offering a clear and succinct presentation of standard propositional and predicate logic, it presents the elements of standard logic and applies those techniques to legal materials. It covers the use of standard logic in legal argument, including the denial or distinguishing of premises and the rules of pleading, and makes extensive use of legal materials, cases and statutes, in both examples and exercises. Readers are also given strategies for handling major legal problems in standard logic, including ways for treating conditions contrary to fact, necessary and sufficient conditions, result within the risk, and intent. For logicians and philosophers of law.
