Dendroecologists apply the principles and methods of tree-ring science to address ecological questions and resolve problems related to global environmental change. In this fast-growing field, tree rings are used to investigate forest development and succession, disturbance regimes, ecotone and treeline dynamics and forest decline. This book of global scope highlights state-of-the-science dendroecological contributions to paradigm-shifts in our understanding of ecophysiology, stand dynamics, disturbance interactions, forest decline and ecosystem resilience to global environmental change and is fundamental to better managing our forested ecosystems for the full range of ecosystem goods and services that they provide.

"To this book I say yes, yes, yes!" —from the Foreword by Richard Carlson, author of *Don't Sweat the Small Stuff* Find more time and energy for the things you love to do—learn to say no without feeling guilty! The simple word "no" is often the most difficult to say. Yet anyone can develop the skills to say no with confidence, kindness, and peace of mind. And the benefits are enormous. You'll spend less time doing things you don't want to do with people you don't want to see, and move closer to your own priorities and passions. *How to Say No Without Feeling Guilty* shows you the five simple techniques that will help you say no with finesse in nearly any situation and how to apply two basic principles to minimize guilt about saying no and reduce the likelihood of personal conflicts. In addition, authors Patti Breitman and Connie Hatch provide specific language and practical strategies for defending your boundaries against life's many intrusions and distractions, including:

- Demanding friends and family members
- Unwelcome invitations, dates, and romantic entanglements
- Requests for money, whether from friends, relatives, organizations, or panhandlers
- Unreasonable assignments at work
- Pushy people who ask for too many favors
- Junk mail, annoying phone calls, and buddies with something to sell
- High-maintenance people
- And much more

Ultimately, "no" can be one of the most positive words in your vocabulary. Whether you crave more family time, more time for yourself, or more time to pursue a dream, saying no frees up room for the "yeses" in your life.

This book is a unique guide to emerging stem cell technologies and the opportunities for their commercialisation. It provides in-depth analyses of the science, business, legal, and financing fundamentals of stem cell technologies, offering a holistic assessment of this emerging and dynamic segment of the field of regenerative medicine. • Reviews the very latest advances in the technology and business of stem cells used for therapy, research, and diagnostics • Identifies key challenges to the commercialisation of stem cell technology and avenues to overcome problems in the pipeline • Written by an expert team with extensive experience in the business, basic and applied science of stem cell research This comprehensive volume is essential reading for researchers in cell biology, biotechnology, regenerative medicine, and tissue engineering, including scientists and professionals, looking to enter commercial biotechnology fields.

The American Language of Rights

The plans for this book began several years ago as I personally sought quality resources for my work with grieving families. With such an abundance of homelectical materials in general, I was concerned that there seemed to be very little to offer guidance for the funeral setting. The goal of this book is to

provide resource material for a setting that has so much potential for ministry. - From the Preface.

The Chain Saw and Crosscut Saw Training Course is guidebook that follows a 16- to 32-hour course for basic to intermediate chain saw and crosscut saw users. The course is designed to provide the technical knowledge and skills that employees or volunteers will need to use these tools safely. For specific needs, such as small limbing and bucking projects by volunteers, portions of the course can be adapted and modified. Course objectives are stated in broad terms that define what students will be able to do after completing this course. Special unit objectives at the beginning of each unit define what students will be able to do after the unit has been completed. Objectives covered include: Course Information Safety Requirements Chain Saw Use and Maintenance Chain Saw Tasks and Techniques Crosscut Saw Tasks and Techniques Field Proficiency

Joe Corrie's neglected classic about a Fife mining community during the General Strike. To raise funds for the soup kitchens feeding the miners and their starving families, Corrie wrote *In Time O' Strife* in 1926 whilst on strike himself, exposing the brutal lives of a family staring hunger and defeat in the face. Some 87 years later, Graham McLaren has adapted, designed and directed this rarely performed classic play. Created by Graham McLaren (*Men Should Weep*, *A Christmas Carol*), the production uses fragments of Corrie's other plays, poems and songs, celebrating his ability as a writer and his contribution to Scottish culture. This edition pairs Corrie's original text with the script created by McLaren's adaptation process.

Protecting Pollinators

Richard A. Primus examines three crucial periods in American history (the late eighteenth century, the civil war and the 1950s and 1960s) in order to demonstrate how the conceptions of rights prevailing at each of these times grew out of reactions to contemporary social and political crises. His

innovative approach sees rights language as grounded more in opposition to concrete social and political practices, than in the universalistic paradigms presented by many political philosophers. This study demonstrates the potency of the language of rights throughout American history, and looks for the first time at the impact of modern totalitarianism (in Nazi Germany and the Soviet Union) on American conceptions of rights. *The American Language of Rights* is a major contribution to contemporary political theory, of interest to scholars and students in politics and government, constitutional law, and American history.

Brian Keen outlines the process he uses to successfully franchise businesses today. His simple four step system is based on over 30 years experience as a franchisee, franchisor and as a consultant working with start ups and established franchises honing their business growth in Australia and overseas. He outlines some of the trickier aspects you need to know to franchise a business right and make the mistakes so many have made. There is more to it than just getting the franchise agreement and operations manuals in place.

" I read on. And then it happens. On page 89. Mary is humiliated, and I know I have to step in. There she is, in an ill-fitting, wine-colored gown that doesn't do anything for her mousy complexion, gathering up her music, when I pass by, and spill my glass of punch right on her dress. I turn, and there is Kevin, dressed in a scarlet coat and all the rest of the uniform of a British Soldier, circa 1811. 'What are you doing here?' I ask. 'Well, this is the part I'm up to in the book.'" The smart middle child in a blue-collar family identifies with Mary, the middle child in Jane Austen's *Pride and Prejudice*. When Alice enters Mary's world and makes changes in both their lives, she learns that first impressions aren't always right.

Fiery aristocrat, Eden Rose, uprooted from her native Scotland, has tended a foundering marriage and failing ranch at the corner of Crazy Woman Creek and the Powder River for a decade. Best friend,

backwoods spitfire Maddie True, has her own woes a few miles away: widowed with a passel of young children, and caretaker to her addled father. Abandoned by her husband during the height of Wyoming Territory's worst drought in history, Eden depends on her inept brother, Aiden, to see her through the coming winter. But when he disappears into the wild Bighorn mountains, she shuns Maddie's fearful cautions, teaming with enigmatic Lakota holy man, Intah, to find her brother before the wicked snow holds them all hostage. In Time O' Strife

Grasslands comprise more than a quarter of the Earth's land surface. In addition to supporting a wide range of vertebrates such as domestic livestock and a

variety of games species, grassland is the natural habitat for a wide range of invertebrate species, and this book considers those which occur in grassland and their impact on soil fertility and herbage growth. It describes grassland as a habitat for invertebrates, the groups which occur there and their abundance. An extensive literature on grassland invertebrates scattered through numerous scientific journals and reports is drawn on in an attempt to develop an overview. In the opening chapter the major grassland types are considered and the features which influence the distribution and abundance of the invertebrates which inhabit them are discussed. Next the major taxonomic groups are reviewed in turn, with a brief account of their biology and ecology and of their ecosystem role. Some general features of grassland invertebrate communities are then described and the factors which influence their population densities of their constituent species are considered. Particular attention is given to the ways in which populations are influenced by management practices. The final and largest chapter deals with the various ways in which invertebrates influence important grassland processes through ingestion of organic matter, interaction with injurious species is considered, with particular emphasis on the potential for achieving this through manipulating grassland management practices.

Motorized Obsessions

Latin America is a megadiverse territory hosting several hotspots of plant diversity and many types of

forest biomes, ecosystems and climate types, from tropical rainforest to semi-arid woodlands. This combination of diverse forests and climates generates multiple responses to ecological changes affecting the structure and functioning of forest ecosystems. Recently, there have been major efforts to improve our understanding of such impacts on ecosystems processes. However, there is a dearth of studies focused on Latin-American forest ecosystems that could provide novel insights into the patterns and mechanisms of ecological processes in response to environmental stress. The abundance of “New World” tree species with dendrochronological potential constitutes an ideal opportunity to improve the ecological state of knowledge regarding these diverse forest types, which are often threatened by several impacts such as logging or conversion to agricultural lands. Thus, detailed information on the dendroecology of these species will improve our understanding of forests in the face of global change. Accordingly, this book identifies numerous relevant ecological processes and scales, ranging from tree species to populations and communities, and from both dendrochronological and dendroecological perspectives. It offers a valuable reference guide for the exploration of long-term ecological interactions between trees and their environmental conditions, and will foster further research and international projects on the continent and elsewhere.

How to Say No Without Feeling Guilty

Annihilate

From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.

It's Not Hansel and Gretel

We should thank a pollinator at every meal. These diminutive creatures fertilize a third of the crops we

eat. Yet half of the 200,000 species of pollinators are threatened. Birds, bats, insects, and many other pollinators are disappearing, putting our entire food supply in jeopardy. Protecting Pollinators breaks down the latest science on environmental threats and takes readers inside the most promising conservation efforts. Efforts range from cities creating butterfly highways to citizen scientists monitoring migration. Along with inspiring stories of revival and lessons from failed projects, readers will find practical tips to get involved. And they will be reminded of the magic of pollinators--the iconic monarchs, dainty hummingbirds, and homely bats alike who bring food to our tables.

First Impressions

Part of the excitement in boundary-layer meteorology is the challenge associated with turbulent flow - one of the unsolved problems in classical physics. An additional attraction of the field is the rich diversity of topics and research methods that are collected under

the umbrella-term of boundary-layer meteorology. The flavor of the challenges and the excitement associated with the study of the atmospheric boundary layer are captured in this textbook. Fundamental concepts and mathematics are presented prior to their use, physical interpretations of the terms in equations are given, sample data are shown, examples are solved, and exercises are included. The work should also be considered as a major reference and as a review of the literature, since it includes tables of parameterizations, procedures, field experiments, useful constants, and graphs of various phenomena under a variety of conditions. It is assumed that the work will be used at the beginning graduate level for students with an undergraduate background in meteorology, but the author envisions, and has catered for, a heterogeneity in the background and experience of his readers.
