The World Food Problem: Report of the panel on the world food supply

This database encompasses all aspects of the impact of people and technology on the environment and the effectiveness of remedial policies and technologies, featuring more than 950 journals published in the U.S. and abroad. The database also covers conference papers and proceedings, special reports from international agencies, non-governmental organizations, universities, associations and private corporations. Other materials selectively indexed include significant monographs, government studies and newsletters.

This year's report presents evidence that the absolute number of people who suffer from hunger continues to slowly increase. The report also highlights that food insecurity is more than just hunger. For the first time, the report provides evidence that many people in the world, even if not hungry, experience moderate food insecurity as they face uncertainties about their ability to obtain food and are forced to compromise on the quality and/or quantity of the food they consume.

This phenomenon is observed globally, not only in low- and middle-income countries but also in high income countries. The report also shows that the world is not on track to meet global nutrition targets, including those on low birthweight and on reducing stunting among children under five years. Moreover, overweight and obesity continue to increase in all regions, particularly among school-age children and adults. The report stresses that no region is exempt from the epidemic of overweight and obesity, underscoring the necessity of multifaceted, multisectoral approaches to halt and reverse these worrying trends. In light of the fragile state of the world economy, the report presents new evidence confirming that hunger has been on the rise for many countries where the economy has slowed down or contracted. Unpacking the links between economic slowdowns and downturns and food insecurity and malnutrition, the report contends that the effects of the former on the latter can only be offset by addressing the root causes of hunger and malnutrition: poverty, inequality and marginalization.

National Union Catalog

Why do millions of people in the less-developed countries go hungry - while there is an abundance of food in the world? What can be done about it? These are the issues explored in this accessible and comprehensive text. In addition to incorporating updated data throughout, this new edition includes: a comprehensive description and analysis of the 2008 food crisis; an expanded discussion of the impact of using food crops to produce biofuels; new case studies and recent examples to illustrate key points; examples of successful and unsuccessful policy approaches; and reference to the latest research findings (with more than 150 new citations). The result is the best available analysis of the current world food problem, as well as a provocative assessment of prospects for the future

Directory of Published Proceedings

This second edition of *The World Food Problem* incorporates an up-to-date description of the state of world food supply and demand, as well as an assessment of prospects for the future. Recognizing that millions of people in the less-developed countries continue to go hungry, while there is more than enough food in the world to feed them, the authors tackle the question of why and what can be done about it. Integrating knowledge from many disciplines (agronomy, economics, nutrition, anthropology, demography, geography, health science, and public policy analysis), this highly readable and comprehensive text provides a combination of information and explanation designed specifically to be used in the undergraduate classroom.

Canadian Books in Print

So often, political science is introduced to students as a segmented field. *The Challenge of Politics* instead enables students to see how the subfields converge around a set of crucial questions: can we, as citizens and students articulate and defend a view of the good political life and its guiding political values? Can we develop a science of politics to help us understand significant political phenomena—the empirical realities of politics? Can we bring a high level of political

Journal of Developing Areas The fifth edition of The World Food Problem reflects nearly a decade of new research on the causes and potential solutions to the problems of producing and distributing food in developing countries. With extensively updated data and new case studies throughout, this edition includes new or expanded discussions of such issues as: ¿ genetically modified food ¿ the impact of climate change ¿ the quality of agricultural land and water ¿ the significance of globalization ¿ implications of changes in demographic policy, such as the reversal of China¿s ¿one-child rule¿ The result is an accessible, comprehensive text, as well as a provocative assessment of prospects for the future.

National Agricultural Library Catalog

Includes entries for maps and atlases.

The Evolving Sphere of Food Security

First multi-year cumulation covers six years: 1965-70.

The World Food Problem

A New York Times bestseller The definitive account of the infectious diseases threatening humanity by Pulitzer Prize-winning investigative journalist Laurie Garrett "Prodigiously researched . . . A frightening vision of the future and a deeply unsettling one." —Michiko Kakutani, The New York Times After decades spent assuming that the conquest of infectious disease was imminent, people on all continents now find themselves besieged by AIDS, drug-resistant tuberculosis, cholera that defies chlorine water treatment, and exotic viruses that can kill in a matter of hours. Relying on extensive interviews with leading experts in virology, molecular biology, disease ecology, and medicine, as well as field research in sub-Saharan Africa, Western Europe, Central America, and the United States, Laurie Garrett's The Coming Plague takes readers from the savannas of eastern Bolivia to the rain forests of the northern Democratic Republic of the Congo on a harrowing, fifty year journey through the history of our battles with microbes. This book is a work of investigative reportage like no other and a wake-up call to a world that has become complacent in the face of infectious disease—one that offers a sobering and prescient warning about the dangers of ignoring the coming plague.

Paperbound Books in Print

Transactions of the North American Wildlife Conference

Based on the work of leading professionals in the field of nutrition research, it explores all aspects of the basic science and mechanics of food processing, food additives and more. Covering everything from acidulants to yogurt, it is intended for reference use in all libraries and the food industry in general. It is an invaluable resource that will prove indispensable for all food science needs.

Report of the World Food Conference, Rome, 5-16 November, 1974

The world food problem. Expanding food production. Reducing wastes and spoilage of foodstuffs. Use of unconventional sources of food. Improving nutritional quality of food. Food and nutrition policy.

Nutrition and the World Food Problem

Moisture Utilization in Semi-Arid Tropics, Summer Rainfall Agriculture (MUSAT:sra) Project

Communicable Diseases, 4th Edition A Global Perspective

Man, Food, and Nutrition

Hundreds of millions of people still suffer from chronic hunger and food insecurity despite sufficient levels of global food production. The poor's inability to afford adequate diets remains the biggest constraint to solving hunger, but the dynamics of global food insecurity are complex and demand analysis that extends beyond the traditional domains of economics and agriculture. How do the policies used to promote food security in one country affect nutrition, food access, natural resources, and national security in other countries? How do the priorities and challenges of achieving food security change over time as countries develop economically? The Evolving Sphere of Food Security seeks to answer these two important questions and others by exploring the interconnections of food security to security of many kinds: energy, water, health, climate, the environment, and national security. Through personal stories of research in the field and policy advising at local and global scales, a multidisciplinary group of scholars provide readers with a real-world sense of the opportunities and challenges involved in alleviating food insecurity. In sub-Saharan Africa, for example, management of HIV/AIDS, the establishment of an equitable system of land property rights, and investment in solar-powered irrigation play an important role in improving food security---particularly in the face of global climate change. Meanwhile, food price spikes associated with the United States' biofuels policy continue to have spillover effects on the world's rural poor with implications for stability and national security. The Evolving Sphere of Food Security traces four key areas of the food security field: 1) the political economy of food and agriculture; 2) challenges for the poorest billion; 3) agriculture's dependence on resources and the environment; and 4) food in a national and international security context. This book connects these areas in a way that tells an integrated story about human lives, resource use, and the policy process.

The World Food Problem

Current Catalog

The aim of this publication is to provide the interested reader with an authoritative and comprehensive up-to-date bibliography on all important facets of the world food problem, encompassing such questions as the availability of natural resources, the present and future sources of energy, environmental quality, population growth, world malnutrition, the state of food production, food consumption patterns, future food needs, toxicological aspects of food, agricultural and industrial aspects of food production, and family planning. It is the first compilation of its kind in that it covers the subject from a multidisciplinary point of view, including publications that deal with the description and analysis of the world

food problem as well as those that offer alternative strategies and specific technological measures for alleviating the problem.
