Urban Regeneration

Conceived as a practical manual of morphological analysis, *The Handbook of Urban Morphology* focuses on the form, structure and evolution of human settlements – from villages to metropolitan regions. It is the first book in any language focused on specific, up-to-date ‘how-to’ guidance, with clear summaries of the central concepts, step-by-step instructions for carrying out the analysis, case studies illustrating specific applications and discussion of theoretical underpinnings tied to evidence from the field. Ideal for students as well as professionals and academics dealing with the built environment.

Routledge Handbook of Sport Policy

Providing students and practitioners with a detailed overview of the key theoretical and applied issues, this book is a comprehensive and integrated primer on regeneration. The various chapters: review the history and context of urban regeneration; consider funding implications; look at environmental, social and community issues, as well as employment, education and training; focus on managing urban regeneration; consider land use issues; and discuss monitoring and evaluation. The book concludes with a comparative analysis, with examples from America and Europe, and a discussion of future trends. The book represents the first systematic overview of urban regeneration in one volume and is set to become the standard referenc

The Housing Design Handbook

Through interdisciplinary and multidisciplinary perspectives, and with an emphasis on exploring patterns as well as distinct and unique conditions across the globe, this collection examines advanced and cutting-edge theoretical and methodological approaches to the study of the health of urban populations. Despite the growing interest in global urban health, there are limited resources available that provide an extensive and advanced exploration into the health of urban populations in a transnational context. This volume offers a high-quality and comprehensive examination of global urban health issues by leading urban health scholars from around the world. The book brings together a multi-disciplinary perspective on urban health, with chapter contributions emphasizing disciplines in the social sciences, construction sciences and medical sciences. The co-editors of the collection come from a number of different disciplinary backgrounds that have been at the forefront of urban health research, including public health, epidemiology, geography, city planning and urban design. The book is intended to be a reference in global urban health for research libraries and faculty collections. It will also be appropriate as a text for university class adoption in upper-division under-graduate courses and above. The proposed volume is extensive and offers enough breadth and depth to enable it to be used for courses emphasizing a U.S., or wider Western perspective, as well as courses on urban health emphasizing a global context.

Home Zones

Urban regeneration schemes involving a wide range of actors and dependent on private investment are increasingly deployed in Europe's cities with the aim of delivering private, merit and public goods. This book explores the relationships, objectives and strategies of the actors engaging in these schemes in cities of three advanced European economies. It researches the outcomes of actor interactions as these transform under the influence of changing market circumstances and associated risks. The book focuses on the way this change is reflected in the provision of mixed-use developments within a context of increasingly polarised housing markets and urban growth patterns. It argues that although these schemes can and do deliver much-needed dwellings, their exposure to market risks may in many cases cause them to fall short of the desired socio-economically sustainable outcomes.

Urban Regeneration

The Routledge Handbook on Historic Urban Landscapes in the Asia-Pacific sheds light onto the balancing act of urban heritage management, focusing specifically on the Asia-Pacific regions in which this challenge is imminent and in need of effective solutions. Urban heritage, while being threatened amid myriad forces of global and ecological change, provides a vital social, cultural, and economic asset for regeneration and sustenance of liveability of inhabited urban areas worldwide. This six-part volume takes a critical look at the concept of Historic Urban Landscapes, the approach that UNESCO promotes to achieve holistic management of urban heritage, through the lens of issues, prospects, and experiences of urban regeneration of the selected geo-cultural context. It further discusses the difficult task that heritage managers encounter in conceptualizing, mapping, curating, and sustaining the plurality, poetics, and politics of urban heritage of the regions in

question. The connective thesis that weaves the chapters in this volume together reinforces for readers that the management of urban heritage considers cities as dynamic entities, palimpsests of historical memories, collages of social diversity, territories of contested identities, and sites for sustainable liveability. Throughout this edited collection, chapters argue for recognizing the totality of the eco-cultural urban fabric, embracing change, building social cohesion, and initiating strategic socio-economic progress in the conservation of Historic Urban Landscapes. Containing thirty-seven contributions written by leading regional experts, and illustrated with over 200 black and white images and tables, this volume provides a much-needed resource on Historic Urban Landscapes for students, scholars, and researchers.

Multifamily Housing Development Handbook

Home zones (areas where cars travel slowly and space has been created for children and environmental improvement) are a common feature of the urban landscape. This handbook explains how to plan and design a home zone in an existing street or as part of a new residential area, including advice and illustrations derived from recent home zone schemes.

Innovations in Collaborative Urban Regeneration

Green infrastructure encompasses many features in the built environment. It is widely recognised as a valuable resource in our towns and cities and it is therefore crucial to understand, create, protect and manage this resource. This Handbook sets the context for green infrastructure as a means to make urban environments more resilient, sustainable, liveable and equitable. Including state-of-the-art reviews that summarise the existing knowledge as well as research findings, this Handbook provides current evidence for the beneficial impact of green infrastructure on health, environmental quality and the economy. It discusses the planning and design of green infrastructure as a strategic network down to the individual features in a neighbourhood and looks at the process of green infrastructure implementation, emphasising the importance of collaboration across multiple professions and sectors. This comprehensive volume operates at multiple spatial scales, from strategic networks at the regional level to individual features in neighbourhoods, with international case studies used throughout to illustrate key examples of good practice. This collection of expert contributions will be invaluable to students and academics in the fields of planning, urban studies and geography. Practitioners and policy-makers will also find the policy discussion and examples enlightening.

Urban Regeneration in the UK

What if, even in the heart of a densely developed city, people could have meaningful encounters with nature? While parks, street trees, and green roofs are increasingly appreciated for their technical services like stormwater reduction, from a biophilic viewpoint, they also facilitate experiences that contribute to better physical and mental health: natural elements in play areas can lessen children's symptoms of ADHD, and adults who exercise in natural spaces can experience

greater reductions in anxiety and blood pressure. The Handbook of Biophilic City Planning & Design offers practical advice and inspiration for ensuring that nature in the city is more than infrastructure—that it also promotes well-being and creates an emotional connection to the earth among urban residents. Divided into six parts, the Handbook begins by introducing key ideas, literature, and theory about biophilic urbanism. Chapters highlight urban biophilic innovations in more than a dozen global cities. The final part concludes with lessons on how to advance an agenda for urban biophilia and an extensive list of resources. As the comprehensive reference on the emerging field of biophilic urbanism, the Handbook is essential reading for students and practitioners looking to place nature at the core of their planning and design ideas and encourage what preeminent biologist E.O. Wilson described as "the innate emotional connection of humans to all living things."

Handbook of Indigenous Religion(s)

"This book pulls together an exceptional range of literature in addressing the complexity of contemporary patterns and processes of urbanization. It offers a rich array of concepts and theories and is studded with fascinating examples that illustrate the changing nature of cities and urban life" - Paul Knox, Virginia Tech University "The SAGE Companion to the City is a tour-de-force of contemporary urban studies. At once a stocktake, showcase and springboard for scholarly approaches to cities and city life, the editors have assembled a cohesive and convincing set of lucid, insightful and critical essays of great quality. Eschewing grand theory and deadening encyclopediasm, the contributors refresh both longstanding concerns and explore new themes in ways both brilliantly accessible to newcomers and satisfying to the cognoscenti." - Robert Freestone, University of New South Wales Organized in four sections The SAGE Companion to the City provides a systematic A-Z to understanding the city that explains the interrelations between society, culture and economy. Histories: explores power, religion, science and technology, modernity, and the landscape of the city. Economies and Inequalities: explores work and leisure, globalisation, innovation, and the role of the state. Communities: explores migration and settlement, segregation and division, civility, housing and homelessness. Order and Disorder: explores politics and policy, planning and conflict, law and order, surveillance and terror. An accessible guide to all areas of urban studies, the text offers both a contemporary cutting edge reflection and measured historical and geographical reflection on urban studies. It will be essential reading for students of any discipline interested in the city as an object of study.

Handbook of Global Urban Health

This book provides a comparative account of the process of urban regeneration and examines the factors influencing these processes, as well as the consequences of their implementation. Through a mixture of theoretical discussion and a series of case studies a thorough examination is made of the extent to which these different European old industrial conurbations are facing similar problems.

Neighborhood Planning and Community-Based Development

This handbook includes contributions from established and emerging scholars from around the world and draws on multiple approaches and subjects to explore the socio-economic, cultural, ecological, institutional, legal, and policy aspects of regenerative food practices. The future of food is uncertain. We are facing an overwhelming number of interconnected and complex challenges related to the ways we grow, distribute, access, eat, and dispose of food. Yet, there are stories of hope and opportunities for radical change towards food systems that enhance the ability of living things to co-evolve. Given this, activities and imaginaries looking to improve, rather than just sustain, communities and ecosystems are needed, as are fresh perspectives and new terminology. The Routledge Handbook of Sustainable and Regenerative Food Systems addresses this need. The chapters cover diverse practices, geographies, scales, and entry-points. They focus not only on the core requirements to deliver sustainable agriculture and food supply, but go beyond this to think about how these can also actively participate with social-ecological systems. The book is presented in an accessible way, with reflection questions meant to spark discussion and debate on how to transition to safe, just, and healthy food systems. Taken together, the chapters in this handbook highlight the consequences of current food practices and showcase the multiple ways that people are doing food differently. The Routledge Handbook of Sustainable and Regenerative Food Systems is essential reading for students and scholars interested in food systems, governance and practices, agroecology, rural sociology, and socio-environmental studies.

Mixed-use Development Handbook

Fully revised and thoroughly updated, the Second Edition of Planning and Urban Change provides an accessible yet richly detailed account of British urban planning. Stephen Ward demonstrates how urban planning can be understood through three categories: ideas - urban planning history as the development of theoretical approaches: from radical and utopian beginnings, to the 'new right' thinking of the 1980s, and recent interest in green thought and sustainability; policies - urban planning history as an intensely political process, the text explains the complicated relation between planning theory and political practice; and impacts - urban planning history as the divergence of expectation and outcome, each chapter shows how intended impacts have been modified by economic and social forces. This Second Edition features an entirely new chapter on the key policy changes that have occurred under the Major and Blair governments, together with a critical review of current policy trends.

Routledge Handbook of Ecocultural Identity

'It [Urban Regeneration] Should make life somewhat easier for practitioners and will offer a further stimulus to the development of taught courses in the not-so-gentle art of regeneration' - Urban Studies Providing students and practitioners with a detailed overview of the key theoretical and applied issues, this book is a comprehensive and integrated primer on regeneration. The various chapters: review the history and context of urban regeneration; consider funding implications; look at environmental, social and community issues, as well as employment, education and training; focus on managing urban regeneration; consider land use issues; and discuss monitoring and evaluation. The book

concludes with a comparative analysis, with examples from America and Europe, and a discussion of future trends. The book represents the first systematic overview of urban regeneration in one volume and is set to become the standard reference work. As such, it will be required reading for practitioners involved in regeneration, and students of urban studies, planning, architecture, and estate management.

The Routledge Handbook of Henri Lefebvre, The City and Urban Society

The Routledge Handbook of Henri Lefebvre, The City and Urban Society is the first edited book to focus on Lefebvre's urban theories and ideas from a global perspective, making use of recent theoretical and empirical developments, with contributions from eminent as well as emergent global scholars. The book provides international comparison of Lefebvrian research and theoretical conjecture and aims; to engage with and critique Lefebvre's ideas in the context of contemporary urban, social and environmental upheavals; to use Lefebvre's spatial triad as a research tool as well as a point of departure for the adoption of ideas such as differential space; to reassess Lefebvre's ideas in relation to nature and global environmental sustainability; and to highlight how a Lefebvrian approach might assist in mobilising resistance to the excesses of globalised neoliberal urbanism. The volume draws inspiration from Lefebvre's key texts (The Production of Space; Critique of Everyday Life; and The Urban Revolution) and includes a comprehensive introduction and concluding chapter by the editors. The conclusions highlight implications in relation to increasing spatial inequalities; increasing diversity of needs including those of migrants; more authoritarian approaches; and asymmetries of access to urban space. Above all, the book illustrates the continuing relevance of Lefebvre's ideas for contemporary urban issues and shows – via global case studies – how resistance to spatial domination by powerful interests might be achieved. The Handbook helps the reader navigate the complex terrain of spatial research inspired by Lefebvre. In particular the Handbook focuses on: the series of struggles globally for the 'right to the city' and the collision of debates around the urban age, 'cityism' and planetary urbanisation. It will be a guide for graduate and advanced undergraduate teaching, and a key reference for academics in the fields of Human Geography, Sociology, Political Science, Applied Philosophy, Planning, Urban Theory and Urban Studies. Practitioners and activists in the field will also find the book of relevance.

Routledge Handbook of Sustainable and Regenerative Food Systems

Local regeneration, and action on local issues, is fundamental to the sustainability of local communities. This is especially the case in the UK, with the Government focus on such approaches as Local Enterprise Partnerships and neighbourhood development plans, and further devolution proposals in the pipeline. The Local Regeneration Handbook meets the needs of today's practising "regeneration workers", broadly including anyone from regeneration partnership or development project officers to housing association neighbourhood officers, parish councillors, or other active local citizens, who all share a concern for the wellbeing of the

community where they live or work, and a need to work with others for the best possible future for that community. Containing practical advice, templates, and real-life case studies for different stages in local regeneration, including fundraising, partnership development and project management, as well as support for personal development, and illustrations of key points by cartoonist Kipper Williams, this is an essential guide for anyone in local regeneration.

Handbook of Urban Studies

The urban landscape of the UK is undergoing its most dramatic transformation since post-war reconstruction. This volume is a systematic guide to that transformation that draws together a mass of information - from policy reports to academic studies - into a single coherent text. Examining key aspects of the process from first principles, *Urban Regeneration in the UK*: - introduces and contextualises the UK urban regeneration agenda - brings together state-of-the-art research around key themes in governance, sustainability, competition, and design - uses case studies of UK contemporary regeneration projects - combines academic and theoretical explorations whilst linking theory and practice - includes pedagogical features of key learning points, useful websites, a glossary and further reading. Aimed at those studying and working in the field of urban regeneration and planning, *Urban Regeneration in the UK* provides a highly readable introduction to urban regeneration for undergraduates, post-graduates, and practitioners.

The Urban Masterplanning Handbook

A highly illustrated reference tool, this handbook provides comparative visual analysis of major urban extensions and masterplans around the world. It places an important new emphasis on the processes and structures that influence urban form, highlighting the significant impact that public or private land ownership, management and funding might have on shaping a particular project. Each of the book's 20 subjects is rigorously analysed through original diagrams, scale drawings and descriptive texts, which are complemented by key statistics and colour photography. The case studies are presented in order of size rather than date or geographical location. This offers design professionals, developers and city planners, as well as students of architecture and urban design informed organisational and formal comparisons, leading to intriguing insights. A wide geographical range of contemporary and historic masterplans are featured. These encompass European projects from the 19th century to the present day: Belgravia in London, Sarphatipark in Amsterdam, Potsdamer Platz in Berlin, La Défense Seine Arche in Paris and Hammarby Sjöstad in Stockholm. In North America, the postwar development of Stuyvesant Town in Manhattan is also the subject of a case study. More recent and ongoing international urban schemes are included, such as Puerto Madero in Buenos Aires, Downtown Dubai and the New Central Business District in Beijing.

Events and Urban Regeneration

Regenerating Urban Land draws on the experience of eight case studies from around the world. The case studies outline various policy and financial instruments

to attract private sector investment in urban regeneration of underutilized and unutilized areas and the requisite infrastructure improvements. In particular, each case study details the project cycle, from the scoping phase and determination of the initial amount of public sector investment, to implementation and subsequent leveraged private-sector funds. This manual analyzes rates of return on the investments and long-term financial sustainability. Regenerating Urban Land guides local governments to systematically identify the sequence of steps and tasks needed to develop a regeneration policy framework, with the participation of the private sector. The manual also formulates specific policies and instruments for expanding private sector participation; structuring effective administrative and legal frameworks; utilizing land readjustment/assembly methods; determining duration of contracts, adequate phasing, and timeline; and balancing the distribution of risk and sustainability measures.

Research Handbook on Community Development

Latin America and the Caribbean constitute the second-most urbanised region in the world, with many cities still growing exponentially. Long-term strategies need to be developed to meet the resulting challenges. How can growing cities be planned without neglecting their urbanity? How can urban spatial growth be managed in tandem with social, environmental, cultural, and economic challenges? Between 2013 and 2018, the Urban Design Lab worked in over twenty emerging cities in Latin America and the Caribbean. They developed dynamic planning tools that trigger transformative urban processes by engaging and empowering local communities. This handbook not only explains the context and emerging problems faced by the cities of Latin America and the Caribbean, but also proposes solutions for typical difficulties encountered within those urban conglomerations. 250 colour, 50 b/w images

Planning and Urban Change

In recent years, major sporting and cultural events such as the Olympic Games have emerged as significant elements of public policy, particularly in efforts to achieve urban regeneration. As well as opportunities arising from new venues, these events are viewed as a way of stimulating investment, gaining civic engagement and publicizing progress to assist the urban regeneration process more generally. However, the pursuit of regeneration involving events is a practice that is poorly understood, controversial and risky. Events and Urban Regeneration is the first book dedicated to the use of events in regeneration. It explores the relationship between events and regeneration by analyzing a range of cities and a range of sporting and cultural events projects. It considers various theoretical perspectives to provide insight into why major events are important to contemporary cities. It examines the different ways that events can assist regeneration, as well as problems and issues associated with this unconventional form of public policy. It identifies key issues faced by those tasked with using events to assist regeneration and suggests how practices could be improved in the future. The book adopts a multi-disciplinary perspective, drawing together ideas from the geography, urban planning and tourism literatures, as well as from the emerging events and regeneration fields. It illustrates arguments with a range of international case studies placed within and at the end of chapters to show positive

outcomes that have been achieved and examples of high profile failures. This timely book is essential reading for students and practitioners who are interested in events, urban planning, urban geography and tourism.

The Routledge Handbook of Housing Policy and Planning

It is difficult to fully understand the role that sport plays in contemporary global society without understanding how and why governments, NGOs and other organizations formulate and implement policy relating to sport. The Routledge Handbook of Sport Policy is the only book to offer a comprehensive overview of current perspectives, techniques and approaches to the analysis of sport policy around the world. The book introduces a diverse range of approaches to policy analysis across the full range of political and societal contexts, including developed and developing economies; state-centric, mixed economy and market-led systems, and both liberal democracies and political systems characterized by a dominant elite. It is arranged into five sections addressing the key topics and themes in the analysis of contemporary sport policy, including: theory and its implications for methodology globalization, governance, partnerships and networks elite sport policy development, sport and joint policy agendas sport policy and social theory. With contributions from leading policy analysts around the world, including Europe, North America, the Middle East and Asia, this book is important reading for any student, researcher or professional working in sport management, sport development, sport and society, or mainstream public policy, policy analysis or social policy.

Urban Regeneration in the UK

"A thorough update of what was already an excellently written, accessible and well-used book. Coverage of the key issues to impact on regeneration in the UK since the 2008 financial crisis is comprehensive, and ensures that this latest edition will remain a key reference work for students and practitioners alike." - Dr David Jarvis, Coventry University and Deputy Director, Applied Research Centre in Sustainable Regeneration (SURGE) "An accessible text for students that provides an excellent summary of the challenges facing the UK regeneration sector up to and including the present age of austerity." - Dr Lee Pugalis School of Built Environment, Northumbria University An engaging, systematic guide to the most dramatic

transformation of our urban landscape since post-war reconstruction. This new edition has been fully revised to include: Improved pedagogical features, including an expanded glossary and increased visuals, as well as key learning points, useful websites and suggestions for further reading More content on local sustainability and issues linked to climate change A new chapter, 'Scaling Up', which examines how regeneration operates when considering very large schemes, such as the London 2012 Olympics. Jones and Evans draw together a mass of information around key themes in governance, sustainability, competition and design - from policy reports to academic studies - into a single coherent text, making this essential reading for anyone studying or working in the field of urban regeneration and planning.

Urban Regeneration

Handbook on Place Branding and Marketing

The Routledge Handbook of Housing Policy and Planning provides a comprehensive multidisciplinary overview of contemporary trends in housing studies, housing policies, planning for housing, and housing innovations in the United States, the United Kingdom, and Continental Europe. In 29 chapters, international scholars discuss aspects pertaining to the right to housing, inequality, homeownership, rental housing, social housing, senior housing, gentrification, cities and suburbs, and the future of housing policies. This book is essential reading for students, policy analysts, policymakers, practitioners, and activists, as well as others interested in housing policy and planning.

The SAGE Companion to the City

'It [Urban Regeneration] Should make life somewhat easier for practitioners and will offer a further stimulus to the development of taught courses in the not-so-gentle art of regeneration' - Urban Studies Providing students and practitioners with a detailed overview of the key theoretical and applied issues, this book is a comprehensive and integrated primer on regeneration. The Routledge Companion to Urban Regeneration

In the past decade, urban regeneration policy makers and practitioners have faced a number of difficult challenges, such as sustainability, budgetary constraints,

demands for community involvement and rapid urbanization in the Global South. Urban regeneration remains a high profile and important field of government-led intervention, and policy and practice continue to adapt to the fresh challenges and opportunities of the 21st century, as well as confronting long standing intractable urban problems and dilemmas. This Companion provides cutting edge critical review and synthesis of recent conceptual, policy and practical developments within the field. With contributions from 70 international experts within the field, it explores the meaning of 'urban regeneration' in differing national contexts, asking questions and providing informed discussion and analyses to illuminate how an apparently disparate field of research, policy and practice can be rendered coherent, drawing out common themes and significant differences. The Companion is divided into six sections, exploring: globalization and neo-liberal perspectives on urban regeneration; emerging reconceptualizations of regeneration; public infrastructure and public space; housing and cosmopolitan communities; community centred regeneration; and culture-led regeneration. The concluding chapter considers the future of urban regeneration and proposes a nine-point research agenda. This Companion assembles a diversity of approaches and insights in one comprehensive volume to provide a state of the art review of the field. It is a valuable resource for both advanced undergraduate and postgraduate students in Urban Planning, Built Environment, Urban Studies and Urban Regeneration, as well as academics, practitioners and politicians.

The Routledge Handbook of Events

This timely Research Handbook offers new ways in which to navigate the diverse terrain of community development research. Chapters unpack the foundations and history of community development research and also look to its future, exploring innovative frameworks for conceptualizing community development. Comprehensive and unequivocally progressive, this is key reading for social and public policy researchers in need of an understanding of the current trends in community development research, as well as practitioners and policymakers working on urban, rural and regional development.

Urban Design Lab Handbook

This collection brings together the latest thinking in urban geography. It provides a comprehensive overview of topical issues and draws on experiences from across the world. Chapters have been prepared by leading researchers in the field and cover themes as diverse as urban economies, inequalities and diversity, conflicts and politics, ecology and sustainability, and information technologies. The Handbook offers a valuable resource for students and researchers interested in cities and the urban in geography and across the wider social sciences.

Urban Regeneration

The Routledge Handbook of Events explores and critically evaluates the debates and controversies associated with this rapidly expanding discipline. It brings together leading specialists from range of disciplinary backgrounds and geographical regions, to provide state-of-the-art theoretical reflection and

empirical research on the evolution of the subject. It is the first major study to examine what events is as a discipline in the twenty-first century, its significance in contemporary society and growth as a mainstream subject area. The book is divided in to five inter-related sections. Section one evaluates the evolution of events as a discipline and defines what events studies is. Section two critically reviews the relationship between events and other disciplines such as tourism and sport. Section three focuses on the management of events, section four evaluates the impacts of events from varying political, social and environmental perspectives and section five examines the future direction of growth in event-related education and research. It offers the reader a comprehensive synthesis of this field, conveying the latest thinking and research. The text will provide an invaluable resource for all those with an interest in Events Studies, encouraging dialogue across disciplinary boundaries and areas of study.

Urban Regeneration in Europe

Everyone deserves a decent and affordable home, a truth (almost) universally acknowledged. But housing in the UK has been in a state of crisis for decades, with too few homes built, too often of dubious quality, and costing too much to buy, rent or inhabit. It doesn't have to be like this. Bringing together a wealth of experience from a wide range of housing experts, this completely revised edition of *The Housing Design Handbook* provides an authoritative, comprehensive and systematic guide to best practice in what is perhaps the most contentious and complex field of architectural design. This book sets out design principles for all the essential components of successful housing design - including placemaking, typologies and density, internal and external space, privacy, security, tenure, and community engagement - illustrated with case studies of schemes by architecture practices working across the UK and continental Europe. Written by David Levitt and Jo McCafferty - two recognised authorities in the field - and with contributions from more than twenty other leading practitioners, *The Housing Design Handbook* is an essential reference for professionals and students in architecture and design as well as for government bodies, housing associations and other agencies involved in housing.

The Community Planning Handbook

Growing numbers of residents are getting involved with professionals in shaping their local environment, and there is now a powerful range of methods available, from design workshops to electronic maps. *The Community Planning Handbook* is the essential starting point for all those involved - planners and local authorities, architects and other practitioners, community workers, students and local residents. It features an accessible how-to-do-it style, best practice information on effective methods, and international scope and relevance. Tips, checklists and sample documents help readers to get started quickly, learn from others' experience and to select the approach best suited to their situation. The glossary, bibliography and contact details provide quick access to further information and support.

Handbook on Green Infrastructure

The Handbook of Urban Studies provides the first comprehensive, up-to-date account of the urban condition, relevant to a wide readership from academics to researchers and policymakers. It provides a theoretically and empirically informed account embracing all the different disciplines contributing to urban studies. Leading authors identify key issues and questions and future trends for further research and present their findings so that, where appropriate, they are relevant to the needs of policymakers. Using the city as a unifying structure, the Handbook provides an holistic appreciation of urban structure and change, and of the theories by which we understand the structure, development and changing character

Regenerating Urban Land

In creating urban space, there is always an exchange of dialogue as to what the space currently is and how it ought to exist, by those who live in that place, those who have a stake in its future, and those who sense the need for improvement in its harsh reality. Some of their thoughts materialize in the form of a physical change to the current environment – and urban regeneration is one such form. This process in which people redefine their living environment and socially reconstruct the meaning and value of a place is all too important in deciding what, if any, change should be introduced in the form of a physical project. Some might argue that this communicative process is indeed the very core or even the definition of urban regeneration rather than a mere condition for instigation. However, it has also been observed that such a communicative process is often difficult to manage, if it happens at all. Social exclusion, power imbalance, conflict, indifference, and lack of communicative social capital are the usual suspects in collective inaction, but it is also true that they are familiar constituents of any urban life. In some social contexts, little attention has been paid to such complexity.

The Handbook of Urban Morphology

Illustrated in full color, this authoritative resource explains best practices, techniques, and trends in multifamily housing developments.

Planning, Risk, and Property Development

Exploring the streets of London, Manchester, Belfast, Edinburgh or Cardiff, one cannot help but notice the striking transformations taking place in the urban landscapes. This prominent regeneration of urban areas in the UK and around the world has become an increasingly important issue amongst governments and populations. The growing concern has been a result of the impacts of the decline of cities since the collapse of manufacturing industries and the heightening of global competition. A range of innovative approaches to tackle urban problems have been taken over many decades to attempt to regenerate the fortunes of towns and cities across the UK. This text provides an accessible, yet critical, synthesis of urban regeneration in the UK incorporating key policies, approaches, issues and debates. The central objective of the book is to place the historical and contemporary regeneration agenda into context. Section one sets up the conceptual and policy

framework for urban regeneration in the UK. Section Two traces policies that have been adopted by central government to influence the social, economic and physical development of cities, including early municipal interventions in the late nineteenth century, community-focused urban policies of the late 1960s, entrepreneurial property-led regeneration of the 1980s and competition for urban funds in the 1990s. The penultimate section illustrates the key thematic policies and strategies that have been pursued by cities themselves, focusing particularly on improving economic competitiveness and tackling social disadvantage. These approaches are contextualized by discussions covering, for example, urban competitiveness policies and the focus on sustainable urban regeneration. The final section summarizes key issues and debates facing urban regeneration, and speculates upon future directions. *Urban Regeneration in the UK* blends the approaches taken by central government programmes and cities themselves in the regeneration process. The latest ideas and examples from across disciplines and across the UK's urban areas are illustrated. This book provides a comprehensive and up-to-date synthesis that will fill a significant gap in the current literature on regeneration and will be a tool for students as well as a seminal read for practitioners and researchers.

Local Regeneration Handbook

Consisting of original scholarship at the intersection of indigenous studies and religious studies, the *Handbook of Indigenous Religion(s)* includes a programmatic introduction arguing for new ways of conceptualizing the field, numerous case study-based examples, and an Afterword by Thomas Tweed.

Handbook of Biophilic City Planning & Design

Place branding as an academic field is both challenging and under explored. In the face of an ever-expanding urban population, this *Handbook* addresses this knowledge deficit in order to illustrate how place branding can contribute to transforming urban agglomeration into sustainable and healthy areas.

The Routledge Handbook on Historic Urban Landscapes in Asia-Pacific

Exploring the promise and limits of grassroots strategies for community organizing, development and planning, this book looks at how they can be used in the revitalization and maintenance of urban neighborhoods. The book presents a number of case studies from the United States, analyzing the reasons for success and failure, and concludes with recommendations in the form of a "tool kit" for planners and community leaders.

Handbook of Urban Geography

The *Routledge Handbook of Ecocultural Identity* brings the ecological turn to sociocultural understandings of self. The editors introduce a broad, insightful assembly of original theory and research on planetary positionalities in flux in the Anthropocene - or what in this *Handbook* cultural ecologist David Abram

presciently renames the Humilocene, a new “epoch of humility.” Forty international authors craft a kaleidoscopic lens, focusing on the following key interdisciplinary inquiries: Part I illuminates identity as always ecocultural, expanding dominant understandings of who we are and how our ways of identifying engender earthly outcomes. Part II examines ways ecocultural identities are fostered and how difference and spaces of interaction can be sources of environmental conviviality. Part III illustrates consequential ways the media sphere informs, challenges, and amplifies particular ecocultural identities. Part IV delves into the constitutive power of ecocultural identities and illuminates ways ecological forces shape the political sphere. Part V demonstrates multiple and unspooling ways in which ecocultural identities can evolve and transform to recall ways forward to reciprocal surviving and thriving. The Routledge Handbook of Ecocultural Identity provides an essential resource for scholars, teachers, students, protectors, and practitioners interested in ecological and sociocultural regeneration.
