Neoclassical Finance provides a concise and powerful account of the underlying principles of modern finance, drawing on a generation of theoretical and empirical advances in the field. Stephen Ross developed the no arbitrage principle, tying asset pricing to the simple proposition that there are no free lunches in financial markets, and jointly with John Cox he developed the related concept of risk-neutral pricing. In this book Ross makes a strong case that these concepts are the fundamental pillars of modern finance and, in particular, of market efficiency. In an efficient market prices reflect the information possessed by the market and, as a consequence, trading schemes using commonly available information to beat the market are doomed to fail. By stark contrast, the currently popular stance offered by behavioral finance, fueled by a number of apparent anomalies in the financial markets, regards market prices as subject to the psychological whims of investors. But without any appeal to psychology, Ross shows that neoclassical theory provides a simple and rich explanation that resolves many of the anomalies on which behavioral finance has been fixated. Based on the inaugural Princeton Lectures in Finance, sponsored by the Bendheim Center for Finance of Princeton University, this elegant book represents a major contribution to the ongoing debate on market efficiency, and serves as a useful primer on the fundamentals of finance for both scholars and practitioners.

This text emphasizes the modern fundamentals of the theory of finance. It provides contemporary examples to help the theory come to life. Topics covered include: arbitrage, net present value, efficient markets, agency theory, options, and the trade-off between risk and return. Corporate Finance, by Ross, Westerfield, and Jaffe is a popular textbook that emphasizes the modern fundamentals of the theory of finance, while providing contemporary examples to make the theory come to life. The authors aim to present corporate finance as the working of a small number of integrated and powerful intuitions, rather than a collection of unrelated topics. They develop the central concepts of modern finance: arbitrage, net present value, efficient markets, agency theory, options, and the trade-off between risk and return, and use them to explain corporate finance with a balance of theory and application. The well-respected author team is known for their clear, accessible presentation of material that makes this text an excellent teaching tool. Brad Jordan, known for his successful work on the RWJ Fundamentals and Essentials books, contributed to this edition. His influence will be seen particularly in the writing style with smoother coverage of topics, and the increased quality in the problem material.

How many senior executives and managers are able to reach the top with little or no financial training? They may have been appointed to the executive board as a result of their expertise in marketing, HR, sales or IT, yet every board member has a responsibility to make informed decisions on proposed financial actions - decisions which inevitably affect the value of their business. Offering straightforward and practical advice, *Creating Financial Value* will equip those who are not financial specialists with the necessary knowledge not only to contribute fully to important discussions on policy and strategy, but also to develop sound business proposals, or to competently cross-examine the proposals of others. Through examples from a range of business disciplines, the book explains in simple, digestible terms how a business creates financial value, and how a non-financial manager can confidently take an active role in the process. Once read, the book will provide an essential resource that can be referenced time and again. Malcolm Allitt punctures the myths surrounding 'shareholder value' and looks behind the finance jargon to define the boundaries between what a non-specialist should know and when it is good practice to seek the advice of financial specialists. This book is key reading for anyone from a non-financial background who wants to execute their increasingly broad responsibilities competently and confidently, without the need to become experts themselves.

David Berlinski, a senior fellow at Discovery Institute, writes about three profound mysteries: the existence of the human mind, the existence and diversity of living creatures, and the existence of matter. They present some of the vocational aspects, emphasizing the equity markets. The book approaches the material from the practitioner's viewpoint and familiarizes readers with how volatility is linked to speculation, trading volume, and information arrival. It also discusses recent trends in forecasting volatility, along with the newly cultivated trading platform of volatility derivatives. Given the current state of high levels of volatility in global stock markets, money managers, financial institutions, investment banks, financial analysts, and others need to improve their understanding of volatility.
