By establishing a dialogue in which the meditative practices of Buddhism and Christianity speak to the theories of modern philosophy and science, B. Alan Wallace reveals the theoretical similarities underlying these disparate disciplines and their unified approach to making sense of the objective world. Wallace begins by exploring the relationship between Christian and Buddhist meditative practices. He outlines a sequence of meditations the reader can undertake, showing that, though Buddhism and Christianity differ in their belief systems, their methods of cognitive inquiry provide similar insight into the nature and origins of consciousness. From this convergence Wallace then connects the approaches of contemporary cognitive science, quantum mechanics, and the philosophy of the mind. He links Buddhist and Christian views to the provocative philosophical theories of Hilary Putnam, Charles Taylor, and Bas van Fraassen, and he seamlessly incorporates the work of such physicists as Anton Zeilinger, John Wheeler, and Stephen Hawking. Combining a concrete analysis of conceptions of consciousness with a guide to cultivating mindfulness and profound contemplative practice, Wallace takes the scientific and intellectual mapping of the mind in exciting new directions.

"Highly esteemed Mr. Dooyeweerd: yours is the great merit to have seen that today we can no longer philosophize, as was still possible in the so-called modern era, without answering the question - or at least raising it - in what way philosophy and Christianity relate to each other. Today we know all too well that all philosophizing takes place against the background of a culture that in essential respects is determined by its religion, even in its anti-religious voices and moods or in its seemingly indifferent discussions and argumentation. The period in which philosophy and religion marched separately (or claimed that they could and should do so) is gone." Richard Kroner, Professor of Philosophy, University of Kiel

In this wide-ranging meditation on the meaning of time, Agacinski weaves together discussions of Aristotle, Kant, Hegel, Freud, Heidegger, Baudelaire, Barthes, and especially Walter Benjamin -- her model for the modern "passer of time" -- as she traces a time-line of the philosophy of time.

In the sequel to *The Man with the Golden Torc*, Eddie Dhood is forced to take on some nasty demons from another dimension, who arrived in this world at the behest of the Dhood family to help battle the Nazis during World War II and who have decided that they have no intention of leaving.

"Daemon in the Sanctuary" explores the uncanny contradiction between the phenomenological experience of home as a site of nurture and

security and the empirical reality that people are far more likely to be hurt and even killed in their own homes by their intimates, rather than at the hands of strangers. Moving from the syrupy tributes of the god of love in Plato's "Symposium" to the subject of domestic violence appears to be a giant leap, but the author shows that embroidered romantic ideas about love prepare the initiate poorly for the reality of intimate connection. Poets and philosophers who lead us to believe that love is heaven sent can leave us craving an extreme experience. We crave an earth-shaking, life-altering intrusion on our tranquility as evidence that love is real. Thus the naive initiate can easily mistake the flutter of the pulse, the quickening of the heart rate, the flush, the confused emotions, and the painful longing as signs of the god's gift. But these are also the signs of fear! Wendy C. Hamblet, a philosopher in the phenomenological lineage, examines the truth value of phenomenological experience, through the lens of the problem of intimate violence. If Husserl is right and phenomenological method provides the ground of all empirical truth, then what is to be made of the fundamental contradiction between the lived experience of home as a site of nurture and security and of intimates as guardians and caretakers, and the empirical fact, evident in every human society, that people are far more likely to be harmed, and even killed, in their homes or in the homes of their intimates and at the hands of those charged with their care? Hamblet carefully choreographs a dance between the two opposing 'truths' to expose how the lived sense of home, colored by ideals, can tint people's expectations about intimate connection and cloud their ability to recognize the signs of intimate abuse. This book illuminates the dangers and pitfalls of unhealthy intimacy and offers a regimen for loosening the grip of a sickened love's pathological hold.

The renowned philosopher offers "a powerful reflection on our times . . . and the fate of our civilization, as revealed by the catastrophe of Fukushima" (François Raffoul, Louisiana State University). In 2011, a tsunami flooded Japan's Fukushima Daiichi Nuclear Power Plant, causing three nuclear meltdowns, the effects of which will spread through generations and have an impact on all living things. In *After Fukushima*, philosopher Jean-Luc Nancy examines the nature of catastrophes in the era of globalization and technology. He argues that in today's interconnected world, the effects of any disaster will spread in the way we currently associate only with nuclear risk. Can a catastrophe be an isolated occurrence? Is there such a thing as a "natural" catastrophe when all of our technologies—nuclear energy, power supply, water supply—are necessarily implicated, drawing together the biological, social, economic, and political? In this provocative and engaging work, Nancy examines these questions and more. Exclusive to this English edition are two interviews with Nancy conducted by Danielle Cohen-Levinas and Yuji Nishiyama and Yotetsu Tonaki.

In the wake of the bloody civil war that followed Finland's independence from Russia in 1917, the border between the two countries was established across the Karelian Isthmus, an area long fought over by Russia, Finland and Sweden in their attempts to dominate the northern tip of Europe. Neither the Soviets nor the Finnish were comfortable with such a divide which was only 32km from the military and industrial city of Petrograd. As such, both sides began an intensive period of fortification and defensive planning. As the Winter War broke out in November 1939, the complex and heavily defended Mannerheim Line suffered intense bombardment. The armistice of 1940 saw Finland cede control of the entire Karelian Isthmus to the USSR, and a propaganda war ensued. Through an analysis of the background, and operational history of the Mannerheim Line, Bair Irincheev attempts to dispel such myths and provide an accurate assessment of its huge historical importance.

Prof. Giuseppe Joseph Calligaris, an Italian medical doctor who worked in the first half of the 19th century, had discovered that certain lines and points on the skin were related to the conscious and subconscious portions of the mind, and even to the enhancing of paranormal abilities. For over thirty years, Calligaris examined thousands of individuals, published about twenty books and discovered that the geometric system on the human skin could be stimulated in everybody to enhance clairvoyance, clairaudience, and precognition and retrocognition. He believed that our brain just may be a concave mirror for the Universal Consciousness. For his new research Calligaris was 'dumped' by the academic community after he demonstrated in several tests before professors that anybody can become capable of identifying objects on the other side of a wall, by pressing a specific point on the skin for only some minutes. Today the books of Calligaris are very rare., the majority of his materials are no longer available. This is the first book in English language, that helps you rediscover the potential which is hidden in all of us. Calligaris has proven, that the truth is just as near as our skin.

At the beginning of the XX Century, Giuseppe Calligaris, a brilliant Italian doctor and scientist, made an extraordinary discovery: the skin of the entire human body is mapped with little areas, or dots (which he called patches) through which one specific area of the unconscious mind could be stimulated, for either therapeutic or diagnostic purposes. 50 years after his death, two researchers have verified and updated his research study, and have combined it with the late findings from the world of psychology, thus giving birth to a new subject: dermoreflexology. The body has its own memory, which is more deeply rooted than the minds, and through this accurate handbook we are now given the key on how to access it. Simply by pressing or stimulating one specific area of the skin, we can learn how to recall specific episodes that we were not even aware we had experienced; we can stimulate or enhance qualities as patience or creativity, we can remember inspiring dreams, or even make our unconscious speak to us through new dreams... This is a new approach to come to know our inner self and make good use of it, and it is literally... within our reach.

Packed with plenty of clear illustrations, this introductory work shows how to use the matrix methods of structural analysis to predict the static response of structures. Sack emphasizes the stiffness method while providing balanced coverage of the fundamentals of the flexibility method as well. He introduces the various topics in a logical series and develops

equations from basic concepts. The result: readers will gain a firm grasp of theory as well as practical applications. Practical in approach, the well-presented material in this volume is devoted to giving a solid understanding of matrix analysis methods combined with the background to write computer programs and use production-level programs to build actual structures.

What happens on and after December 21, 2012? There has been much confusion and many predictions based on the Mayan calendar. Some people think time on Earth will end, but what if there was an intact and complete resource from the ancestors that will give us the wisdom we need for the shift and an understanding of the coming era? In *"2012-2021: The Dawn of the Sixth Sun,"* Sergio Magana (Ocelocoyotl), mystic and teacher of the ancient Toltec/Aztec lineage of Mesoamerica, discloses an in-depth understanding from a rich and uninterrupted oral tradition, the meaning of the shift from the Fifth to the Sixth Sun, the possibilities presented to humanity at this time, and ancient teachings and practices designed to support this shift. What they have in common is that each one, within their discipline, is aiming to use water's molecular structure and memory to improve our world. This book is connected to a worldwide movement which is going to organize at least four significant worldwide events during 2015 and 2016. The essayists themselves are part of this movement and readers can join too. They will experiment, for instance, with using intention to lower the radioactivity level of Fukushima's water. It is a very young movement but one that has already generated much interest."
