In *Tom Kundig: Works*, the celebrated Seattle-based architect presents nineteen new projects, from Hawaii to New York City. Kundig's award-winning houses, known for their rugged yet elegant and welcoming style, are showcased in lush photography with drawings and sketches, and appear alongside his commercial work—from multistory complexes to the Tacoma Art Museum to a line of hardware (handles, door pulls, hinges, and more). In firsthand accounts, Kundig describes the projects and his design process with many personal anecdotes, making *Tom Kundig: Works* as much memoir as monograph. The book also includes an introduction by design editor Pilar Viladas and in-depth conversations with Kundig's frequent collaborators—“gizmologist” Phil Turner and contractor Jim Dow (Schuchart/ Dow)—and clients (Bigwood Residence and Studhorse).

Modern society is full of linked contracts. Linked contracts, in the broadest sense of the word, can be defined as a plurality of separately concluded contracts that are somehow interrelated. However, contract law is still primarily centered on traditional contractual relations between (just) two parties. This book explores the legal consequences of the existence of linked contracts and provides insights for practice and academia within this new phenomenon. Several examples of linked contracts are covered, including: purchase financing, which consists of a sales contract and a credit contract financing the purchase (Part I) \* cartel agreements, which consist of a framework contract and subsequent contracts to execute the framework contract (Part II) \* linked contracts concluded within the framework of a construction project (Part III) \* a chain of sales contracts between a producer and consumer or end user (Part IV). The book concludes with an analysis of the provisions on linked contracts in the Draft Common Frame of Reference, the Consumer Rights Directive, the Draft Optional Instrument, and a preliminary approach for a general regulation of the concept of linked contracts. The book is the result of the fruitful collaboration within the research program Contract Law and Law of Obligations in general of the Ius Commune Research School ([www.iuscommune.eu](http://www.iuscommune.eu)). "Linked Contracts" was the theme of the workshop on contract law during the 15th Ius Commune Conference in Leuven. (Series: Ius Commune Europaeum - Vol. 103)

With Contributions From Chelvin Sng (National University Health System, Singapore) & Laurence Lim (Singapore National Eye Centre, Singapore) Many new treatments and diagnostic procedures in ophthalmology have been refined or newly developed during the past four years, a new edition reflecting these changes is most timely. The scope and aim of the book will be consistent with the first edition, which provides a broad review of the specialist ophthalmology examinations for final year ophthalmology residents and trainees. The book deals primarily with key facts and topics that are important from the examination perspective. Only information and facts that are considered relevant and critical to the exams are covered, with topics that may be of scientific interest, but are not commonly tested in exams, specifically left out. Time-challenged readers will also benefit from the knowledge acquired from various other sources or textbooks that are now organized and synthesized in this book. While not meant to replace the standard textbooks, enough information is contained within the book to serve as the main revision text nearer the exams. The style and format of this book is intentionally didactic, with questions and short answers. The answer includes a “model opening statement,” followed first by a classification system to aid organization of facts, and then the core explanation in concise short notes. “Exam Tips” are inserted to provide an insight into techniques of answering different types of questions and when appropriate, a “Clinical Approach” section is also included. In the new edition, topics such as new understanding of disease mechanisms (e.g., genetics of eye diseases), new investigations (e.g., OCT), and novel procedures and treatment (e.g., the use of antivascular endothelial growth factors, new refractive surgical techniques) are covered. This book will be a valuable guide to the final year ophthalmology residents and trainees taking the specialist ophthalmology examinations, particularly for exams with a strong oral or viva component. Although primarily aimed at candidates attempting the British postgraduate exams (FRCS, FRANZCO, MRCS, MRCOphth and FRCOphth), it is also useful for other examination systems (e.g., the American Boards). Many junior residents, in fact, find the information handy during grand rounds.
